1. Introduction

The MiTaxiApp Driver App is a state-of-the-art mobile application designed to empower taxi drivers with GPS-integrated dispatch systems, route optimization, and financial management tools. By integrating with Google Maps and real-time backend servers, the application allows drivers to easily match with nearby passengers, execute trips efficiently, manage fleet assignments, track details of earnings, and process payouts.

Key attributes of the MiTaxiApp Driver App include:

GPS Route Optimization: Automatic mapping from pickup coordinates to final drop-off destinations.

Flexible Shift Management: Quick toggle between active availability and offline modes.

Dual Trip Modes: Handling automated passenger requests or initiating instant street pickups.

Transparent Wallet & Payout System: Direct monitoring of earnings, bank withdrawal histories, and company settlements.

Safety Integration: 24/7 SOS system notifying emergency contacts with real-time location.

2. Getting Started & Registration

2.1 Mobile App Registration

To register as a driver directly from your mobile device:

Open the MiTaxiApp Driver app. On the login screen, tap the Sign Up option.

The app will open a secure web registration form where you will need to enter the following details:

First Name & Last Name

Email Address (Optional)

Mobile Number

Password (must be at least 6 characters)

Driver License Details & Expiry Date

Profile Image (upload a JPG or PNG format image from camera or gallery)

Review and check the Terms and Conditions and Privacy Policy box.

Tap Next/Submit. Once submitted, the registration request is forwarded to the administrator dashboard. Your driver profile will be activated after document validation and background clearance.

2.2 Web Portal Registration

Drivers can also register via the MiTaxiApp Web Portal:

Navigate to the MiTaxiApp landing homepage and click on Become a Driver in the top-right corner.

Fill in the registration form, including name, contact details, driver license documents, and profile image.

Upon verification of files by the back-end system, you will receive an SMS and email notification confirming activation of your credentials.

2.3 Data Consent & Security (Store & Secure)

Upon first boot or during registration, MiTaxiApp requires explicit permission check-boxes in compliance with privacy laws:

Location: Required to calculate accurate fares, route progress, and match jobs.

Device Info: Used to monitor ongoing calls to avoid dispatching trips during call states.

Storage & Camera: Necessary for uploading license documents and profile pictures.

Contacts: Accessed strictly to select contact numbers for emergency SOS notifications.

3. Signing In & Account Setup

Once your account has been approved and activated:

Launch the application to display the Sign In screen.

Select your country code, enter your Mobile Number, and key in your Password.

Click Sign In to navigate to the driver home dashboard.

Forgot Password? If you have forgotten your password, tap the Forgot Password ? link on the sign-in page. You will be prompted to enter your registered mobile number to receive a secure link or SMS notification to reset it.

NOTE

If your phone's system time is inaccurate, the app will alert you to adjust your clock settings to ensure secure communications with MiTaxiApp servers.

4. Home Dashboard

The Home Dashboard is the default view once logged in, featuring an interactive map displaying your current location, active shift status, and immediate menu access.

4.1 Online/Offline Shift Toggle

At the top of the map view, you will find your Shift Status switch:

Shift In (Online): Slide or tap the button to go online. The indicator turns green showing "You are on shift". You are now active on the dispatch network and can receive ride requests from nearby passengers.

Shift Off (Offline): Slide or tap to go offline. The indicator displays "You are offline". While offline, you will not receive any dispatch requests, allowing you to take breaks.

4.2 SOS / Emergency Button

In the top-right corner of the home map is the SOS button.

In the event of an emergency, tap SOS.

The system will ask to confirm the emergency alert.

Upon approval, the app automatically triggers a distress notification containing your live GPS coordinates (latitude and longitude) to your pre-saved emergency contacts and the central administration console via text message.

Emergency contacts can be added and modified within the Profile Settings (up to a limit of 3 contacts).

4.3 Main Navigation Menu

The bottom navigation bar contains four key sections:

Home: The main map view and shift toggles.

Earnings: Details of transactions, wallet, and settlements.

Profile: Driver profile info, taxi details, languages, and settings.

Street Pickup: Instant booking interface for curbside passenger pick-ups.

5. Fleet & Vehicle Management

Drivers must have a vehicle assigned before going on shifts.

5.1 Registering a Vehicle (Add Fleet)

If you do not have an assigned vehicle, the dashboard will display a "No Taxi Assigned" warning page.

Tap Add Fleet or My Fleet options.

Enter details:

Vehicle Number / Registration Number

Vehicle Manufacturer & Brand Model

Upload an image of the vehicle (only JPG or PNG formats are supported).

Tap Submit. Once approved, this fleet assignment binds to your driver ID.

5.2 Vehicle Overview (My Fleet)

Within My Fleet, you can view your assigned taxi details, including the Taxi Model, Plate Number, Assigned From Date, and Assigned To Date. If you need to switch vehicles, you can use the Change Fleet button to upload information for a new vehicle.

6. Earnings & Financial Management

The Earnings section is a robust portal that allows drivers to keep track of daily and weekly revenues, manage virtual wallets, request payouts, and resolve commission balances.

6.1 Wallet Balance & Recharge

MiTaxiApp features an in-app driver wallet:

Wallet Balance: Displays your current credit amount.

Recharge Wallet: If you are operating on a commission-based driving structure, you must maintain a minimum wallet threshold. Click Recharge to add money directly to your account using saved or new credit cards.

6.2 Withdrawal Requests

When you accumulate earnings from electronic trip payments or referral rewards, you can request manual withdrawals:

Go to the Withdrawal menu and click Raise Request.

Enter the withdrawal amount.

The request goes to the administration pool. You can monitor the status of past requests (e.g. Not yet approved, Approved, or Deny/Rejected) and view detailed history including requested date, transaction IDs, comments, and payment modes in the Withdraw History view.

6.3 Settlement Requests

The Settlement module tracks payables and receivables between the driver and the company:

Displays Admin Commission (amount due to company) and Driver Commission / Yet to pay by admin (amounts due to you).

Drivers can tap Request to Admin to submit a settlement request to balance accounts.

Note: Only one settlement request can be raised per day, and dates must be selected within a 31-day window.

6.4 Earnings Reports & Graph Views

In the Earnings tab, you can view your revenue records summarized by daily totals, week-to-date earnings, and trip counts. A clean, color-coded bar chart displays earnings per day (e.g., Monday through Sunday) for visual tracking of peak days.

7. Street Pickup

The Street Pickup feature allows drivers to take immediate, unscheduled bookings from the street without a dispatcher.

Tap Street Pickup on the bottom navigation bar (only available when you are not in an active trip).

The app will determine your current GPS pickup location.

Enter the passenger's Drop Location (optional).

Tap Start Trip to immediately begin tracking the journey.

The app calculates the distance and travel time. Upon arrival, tap End Trip to navigate to the Fare Calculator and charge the customer.

8. Ride Request Lifecycle

Executing regular trips involves a structured, step-by-step lifecycle within the app.

8.1 Incoming Job Request

When a booking matches your location, a notification with a warning sound pops up, displaying the Pickup Location, Drop Location, and the passenger's details.

A 30-second countdown is displayed. You must tap Accept before the timer expires, or the trip will automatically route to the next closest driver. You can also manually tap Decline.

8.2 Picking up Passenger (Arrival)

Upon acceptance, the app draws a map route from your location to the passenger's location.

Once you arrive at the pickup spot, tap the Arrived (or I've Arrived) button.

This triggers an SMS/notification to the passenger informing them of your arrival.

8.3 Waiting for Passenger

After marking your arrival, a Waiting Timer displays.

If the passenger does not immediately board, you can start the waiting stopwatch. The system automatically tallies waiting charges based on the wait duration.

An option to call the passenger (Call) is available if you cannot locate them.

8.4 Trip in Progress

Once the passenger is onboard, tap the Start Trip (or Pass Onboard) button.

The map updates to display the optimal route to the drop-off destination.

The screen displays real-time trip parameters: current speed, travel duration, and route progress.

8.5 Fare Calculator & Summary

Upon reaching the destination, tap End Trip.

The screen immediately displays a detailed Fare Calculator invoice:

Base Fare: Flat entry fare.

Distance Fare: Total distance traveled multiplied by distance rates.

Minutes/Time Fare: Charges based on elapsed transit time.

Waiting Charges: Calculated from the waiting period prior to departure.

Evening / Night Charges: Dynamic night/evening surcharges if applicable.

Tax / Discounts: Includes tax percentages and deductions from promo codes.

Sub Total & Net Amount: Final total to be collected.

8.6 Completing Payments (Cash/Card)

The driver selects the passenger's chosen payment method:

Cash: Collect physical cash directly from the passenger.

Card: Process the transaction using the passenger's saved card on file.

New Card: If the passenger wishes to pay with a different card, the driver can tap New Card, enter the credit card details (Number, Expiry, CVV), and click Pay.

Once payment is authorized, a Trip Completed summary screen shows the unique Trip ID and final payment confirmation. Tap Back to Home to return to the active map and receive new jobs.

9. Profile & Settings

The Profile (Me) tab allows you to configure your driver profile settings.

9.1 Editing Profile Details

Drivers can modify details including:

First & Last Name

Email Address

Mobile Number

Profile Picture (via camera or photo gallery)

Vehicle details

Tap Save in the top-right corner to commit changes.

9.2 Change Password

To change passwords:

Go to Profile settings and select Change Password.

Enter your Old Password.

Enter your New Password and confirm it (must be at least 6 characters).

Tap Submit to finalize.

9.3 Account Deletion

If you wish to terminate your driver profile, go to Settings and tap Delete Account. Confirm the action, and your account will be permanently deactivated from MiTaxiApp systems in accordance with data policy compliance.

9.4 Language Configurations

The MiTaxiApp Driver App supports localization. Go to Settings, tap Languages, and select your preferred language. The app interface elements and dialog text will automatically load the selected translation.

9.5 Referral Program (Invite Friends)

Under the Invite Friends menu, drivers can share their unique referral code:

Select share channels: SMS, Email, Facebook, WhatsApp, or Twitter.

When a new driver downloads the app and signs up using your referral code, both you and the new driver receive a referral bonus in your wallet after they successfully complete their first trip.
