TaxiMobility Admin Panel – V 9.0

1. Introduction

TaxiMobility is the most comprehensive management suite that automates every last aspect of operating a taxi service. When a customer inquires, TaxiMobility triggers a pickup request and pushes the request's origin number and address to be displayed. The system then closes in on the point of origin, and once the destination is acquired, it evaluates and picks the most efficient route. It then calculates the trip fare before assigning the ride to a driver in the vicinity.

2. Login

Log in to the admin dashboard using the provided login credentials. If the registered password is forgotten, the admin can click the “Forgot?” option to get the link to reset the password via the registered email ID.

3. Dashboard

With a bird's eye view of essential information, the dashboard presents everything there is to know in a glance. From cab availability to passengers in-line, Dashboard has it all. It contains statistical information on all key factors including the payments, commission to admin, number of new users, rides, active passengers, canceled rides, driver recharge amount, and so forth, listed most precisely and accurately. The search option is enabled in all drop-down lists for easy search. All charts and graphs are provided with links to a more elaborate report of the information available in the particular chart or graph.

TaxiMobility Admin Panel – V 9.0

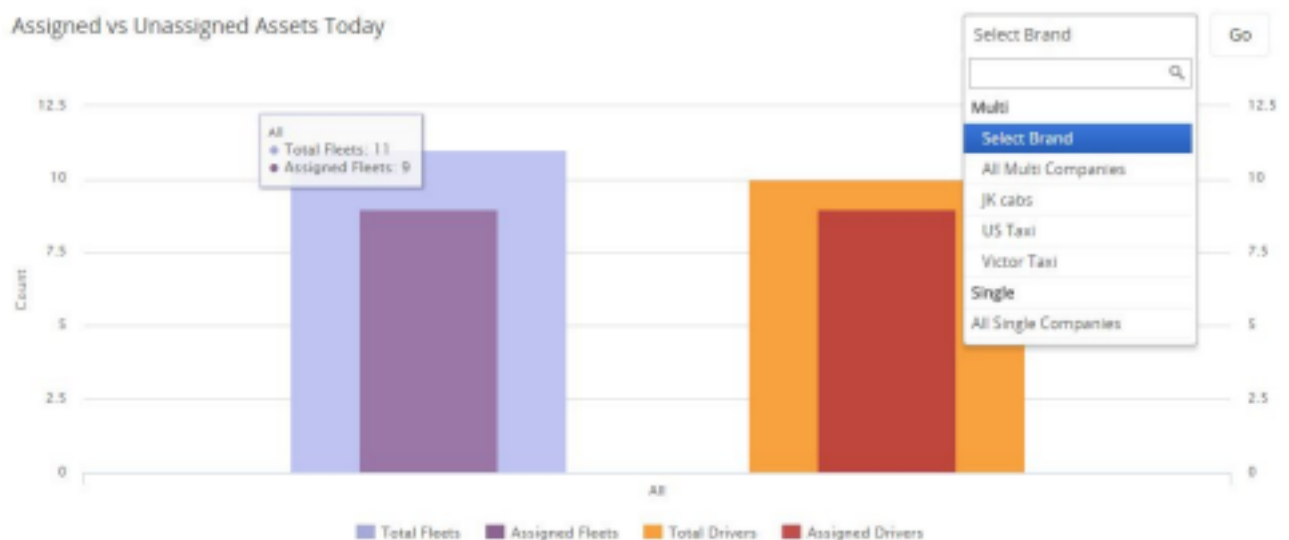

Live fleet status

The map indicates the location and status of drivers as available, on trip, active, or shift out with different pointer icons. The admin can view live tracking with vehicle movements.

Assigned vs. unassigned assets today

The graph displays information on the total number of fleets and drivers, and distinctively the count of assigned fleets and drivers for the selected brand.

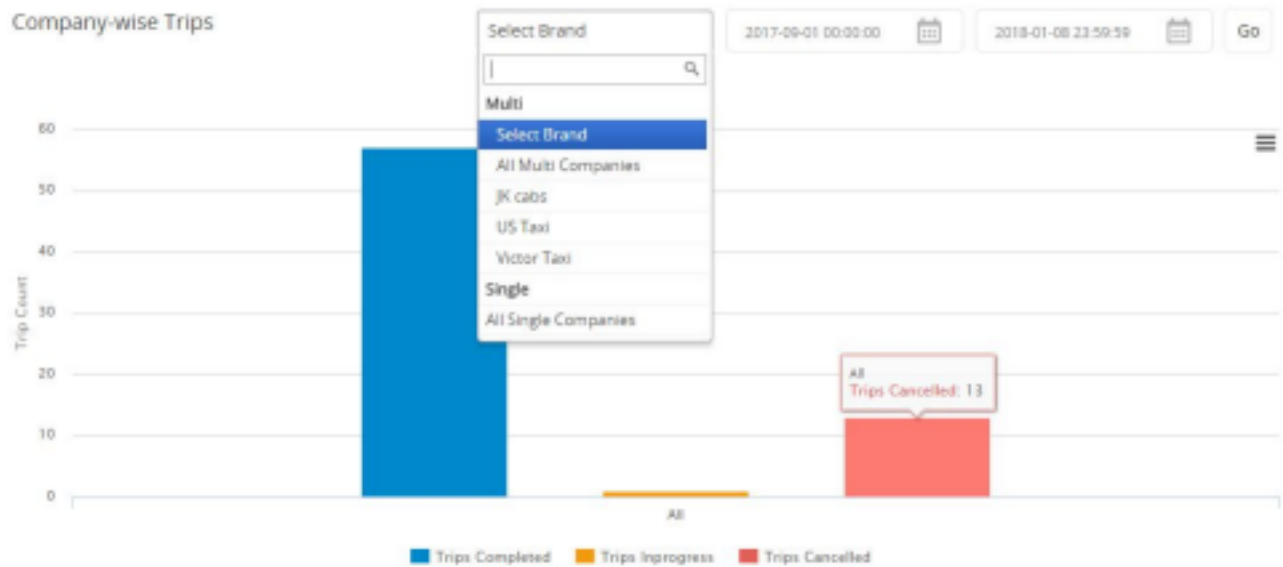

Company-wise trips

The company-wise trip details present the number of rides completed, in progress, and canceled for each company, date, and time selected using the filter. The admin can print or download the data in any of the given formats.

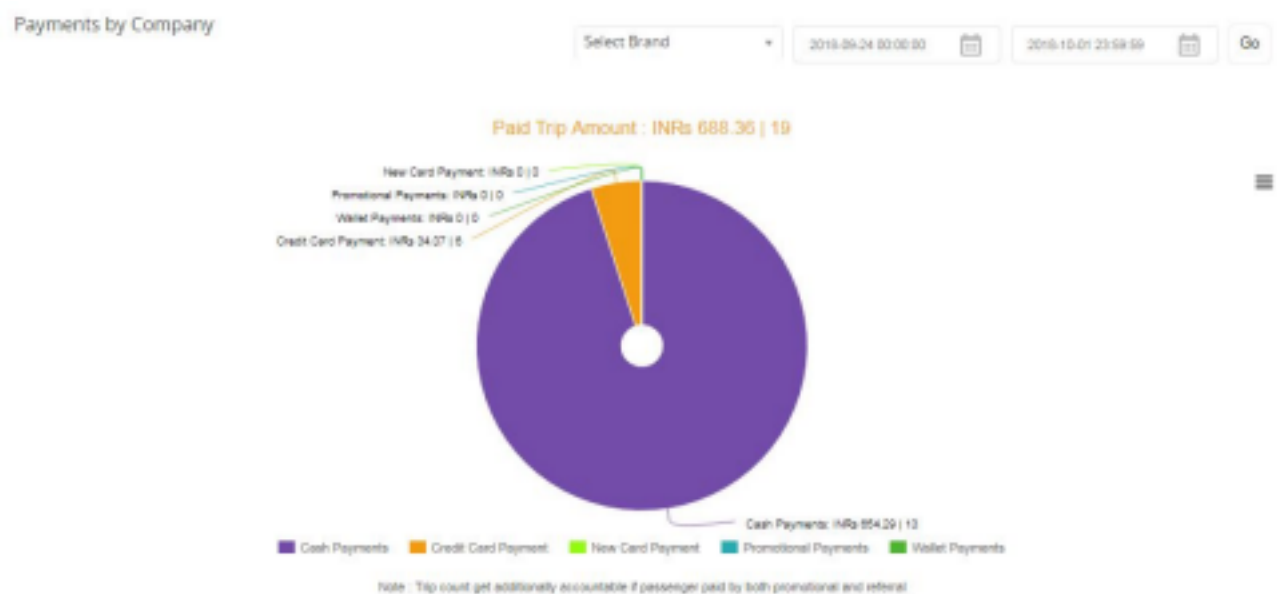

TaxiMobility Admin Panel – V 9.0

Payments by company

All transactions made after the rides are segregated indicating the amount as payments by trip, card, cash, and as payments through referral and promotional programs. These can be easily filtered searching by date and time, or brand.

Trip requests by city

The passenger requests from different cities are represented by a pie chart depending on the origin of passenger request. The details can be filtered using date, time, or brand and can be exported in various file formats.

TaxiMobility Admin Panel – V 9.0

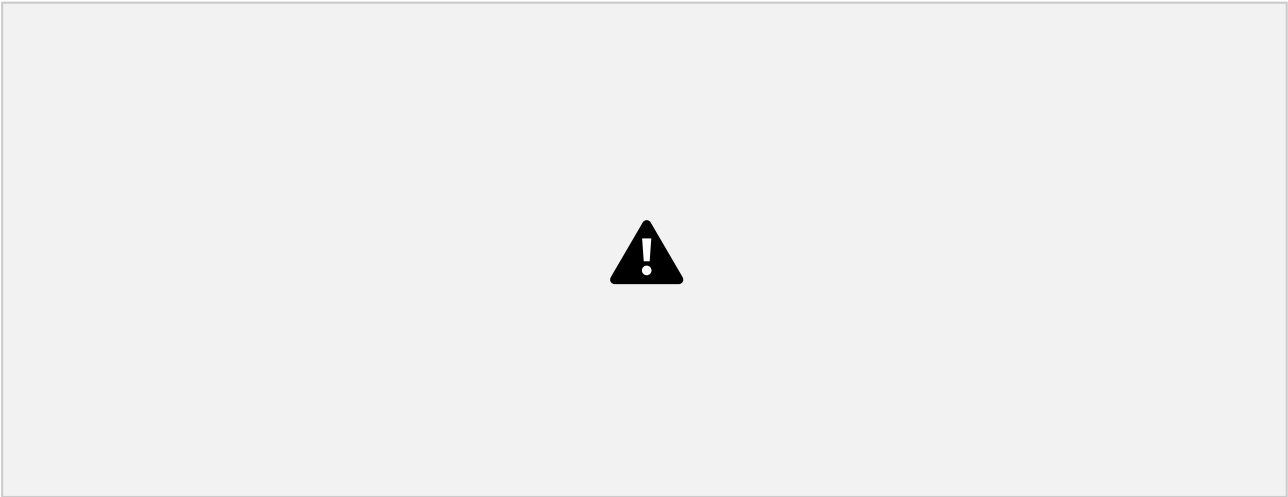

**Company revenue graph**

The graph indicates the total revenue generated for the month displaying the number of rides, new users registered, and the income generated for each day.

**Driver revenue graph**

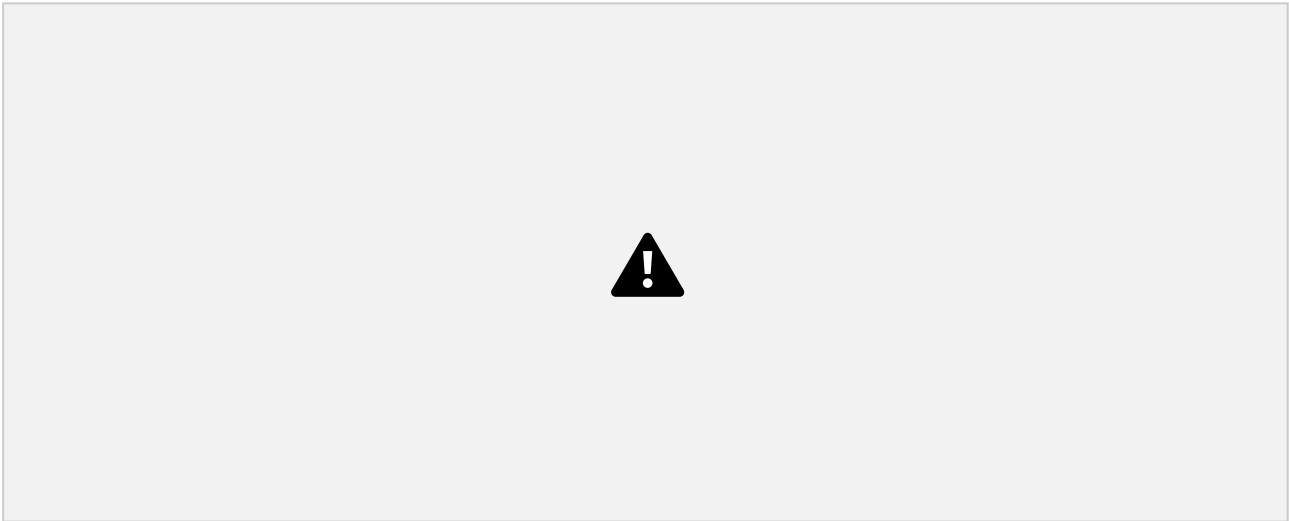

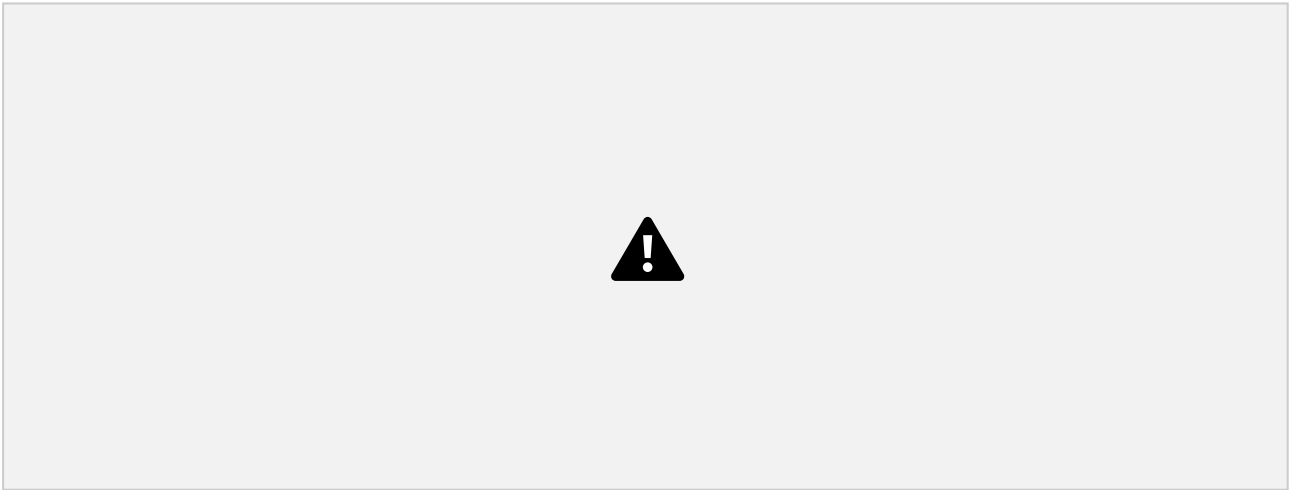

The revenue generated per driver for the month is displayed with the trip count and income for each day.

The filter option helps to view the revenue details per driver by selecting the name from the drop-down and the from and to dates in the calendar.

3.1 Tour

Tour option is available in the header that can also be enabled or disabled at the back end. Click on it, which gives information about each sidebar menu.

4. Fleet Tracking

4.1 Dashboard

The fleet tracking dashboard presents the statistics on fleets, fleet availability, idle running time, driver unavailability, and bookings using graphs and vehicle heatmap. The “Total Kilometers” option describes the total distance traveled by fleets during rides including the empty kilometers. The “Empty Kilometers” option describes the distance traveled empty to pick up a passenger and also without any ride.

Fleet availability

The fleet availability graph indicates the count of vehicles that were available but did not receive any rides for the month. The filter option can be used to select the desired date range.

TaxiMobility Admin Panel – V 9.0

Driver unavailability

The number of drivers who were available but did not accept any passenger request for the day are represented through the graph below.

Plan-based driver count

It displays the graphical representation of the number of drivers who drive under different package plans opted by admin.

Vehicle heatmap

The vehicle heatmap visualizes the position of vehicles in a location, indicating the fleet availability in each area.

4.2 Fleet Management

Manage companies

The admin can have the complete details of the companies here with the number of vehicles, drivers, and dispatchers. By clicking on the company name, you can access the report of the particular company. You can also add vehicles, drivers, and dispatchers directly by clicking on the “Add Fleet”, “Add Driver”, and “Add Dispatcher” in the respective columns, respectively. You can edit the company details by clicking on the “Edit” button in the “Action” column and can access the transaction details by pressing the “Transaction” button in the same column.

Click on the “Add Company” button in the top-right corner to add more companies.

To add a new company, you have to fill up the form with all the required details such as owner name, email ID, mobile number, address, and company information with location details and image. Once you are done with the form, press the “Submit” button.

The report can be downloaded in XLS or PDF format by clicking on the “Export” button on the top-right corner.

Fleet models

This functionality allows categorizing the vehicle types by their brands for easy operations. The “Edit” button in the “Action” column allows to edit and set a more elaborate record of each vehicle.

The vehicle name, model size, and fare details can be tabulated here.

If the fare is calculated by distance, a base fare is set for a fixed distance for each vehicle model. Any ride within that distance will be charged only the base fare. From that point, minimum miles and a minimum fare are fixed, and any ride that is completed within the minimum miles is charged with the below miles fare (in addition to the minimum fare and the base fare). Any ride that exceeds the minimum miles is charged with the above miles fare (in addition to the minimum fare and the base fare). A cancellation fee can be set for all rides that are canceled.

The fare can also be calculated per km/mile instead of below km/miles and above km/miles fare. A minimum fare is set for a fixed distance and every additional km/mile is charged with the set per km/mile fare. This option can be enabled or disabled as per preference.

If the fare is calculated by time, the fare is set for a minute and is calculated by the time (in minutes) taken to complete the ride. The speed per hour of a fleet is fixed for a vehicle, below which the waiting charges will apply. Separate charges for night and evening rides can be recorded, if preferred.

The images of vehicles can also be included in the profile separately for Android and iOS devices.

Fare management

Minimum KM – This is the minimum kilometer range set for short trips.

Minimum fare – This is the fare for the distance traveled below the Minimum KM. The minimum amount can be increased or decreased as required. This fare is applicable when a passenger takes up ride for a short distance which is below the Minimum KM.

Base fare – The basic service charge is applicable for all rides that cover a distance above the Minimum KM.

Below KM and Above KM range – This acts as a divider in calculating the KM fare. Assume the value is 10 KM.

Below KM fare – This is applicable when the distance covered is below 10 KM (for instance, if the distance is 8 KM).

Above KM fare – This is applicable when the distance covered is above 10 KM (for instance, if the distance

is 18 KM).

KM-wise fare – The fare is calculated based on the distance. A minimum fare is set for a fixed distance and every additional km/mile is charged with the per km/mile fare.

Tax – The tax percentage will be included in the total ride fare.

Cancellation fee – This is charged when a passenger cancels the trip.

Waiting fee – Waiting charges are applied when the vehicle is put on waiting or when the vehicle runs below the minimum fleet speed.

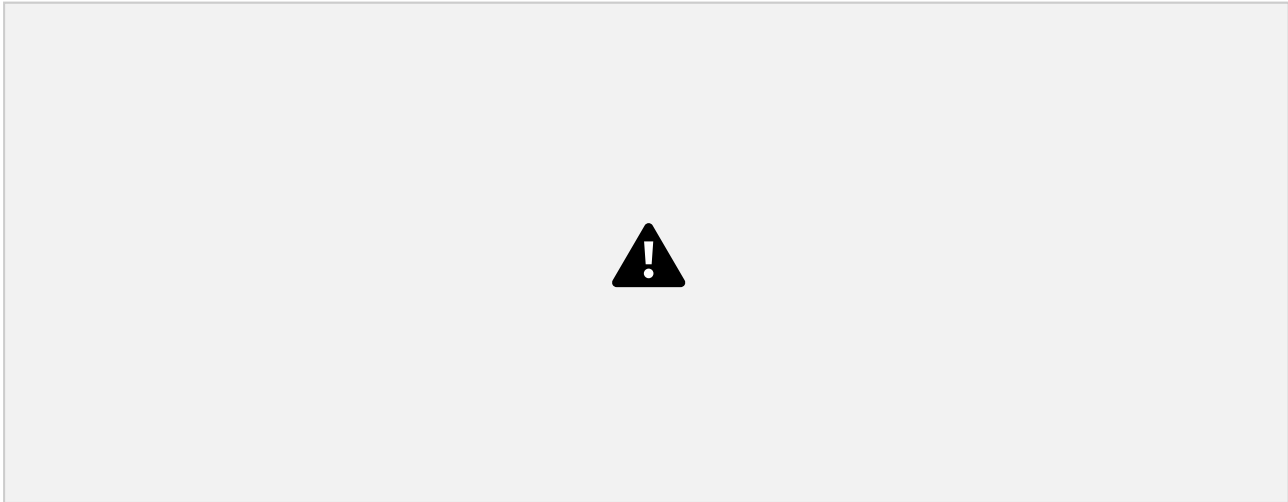

Night fare – This fare is set in percentage for the rides booked during nights. The amount is included in the total ride fare. The time range can be set by the admin.

Evening fare – The admin can set the evening fare for rides in percentage. This is added to the total ride fare.

City-based fare (%) – The city-based fare (%) is defined in Manage City, and the amount is added along with the Distance, Night, and Evening Fare.

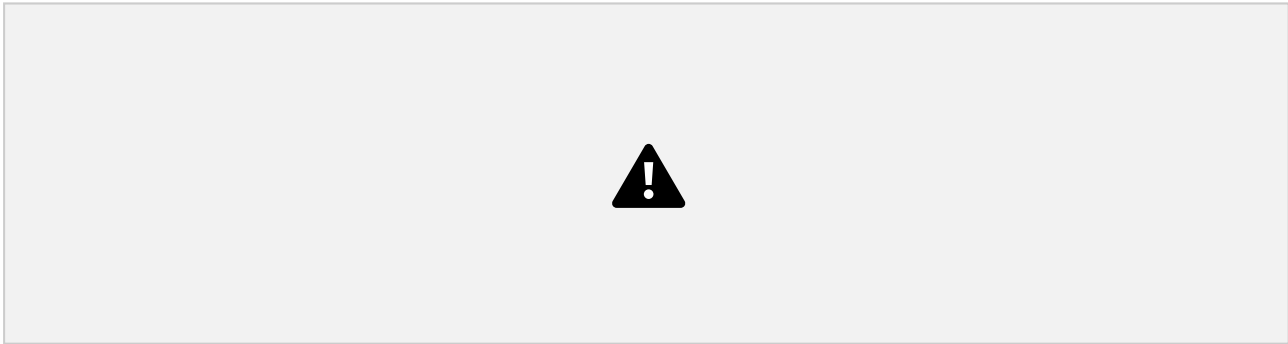

By clicking on the model name, you can get the complete details of the model.

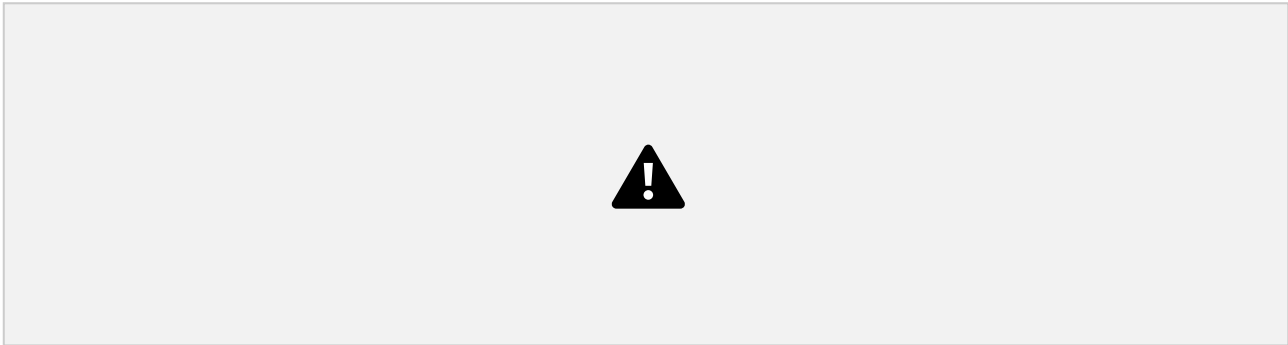

Fleets

It is listing out the vehicles with detailed information including the vehicle number, the owner companies, vehicle types, and models. Use the keyword search to locate the data on any vehicle more conveniently.

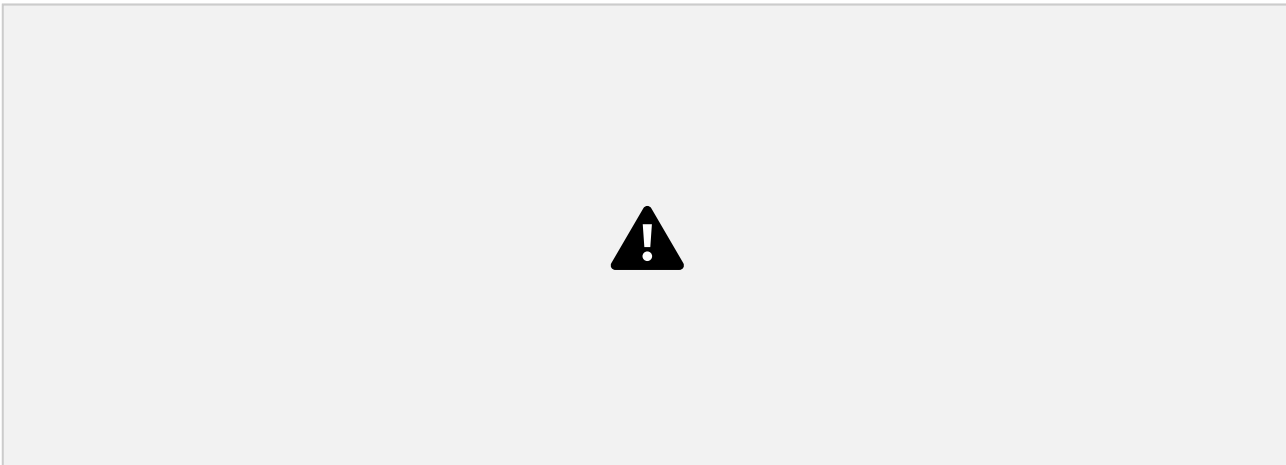

The admin can add more vehicles by clicking on the “Add Fleet” icon.

	Any particulars of a vehicle such as the fleet number, minimum speed of the fleet, fleet speed/hr, model name, owner name, manufacturer, color, insurance details, license details, and the load capacity of each vehicle can be included here. The images of vehicles can also be included in the profile.
---	---

The admin can also assign fleets to drivers here. The available drivers will be listed in the drop-down for the admin to select from and assign the selected vehicle to that particular driver.

The admin can import files to the database. While importing, the admin will be notified of any errors such as invalid taxi number, invalid company email, and so on.

The report can be downloaded in XLS or PDF format by clicking on the “Export” button on the top-right corner.

Package plans

The passengers can be rolled out with two ride packages that are Rental and Outstation.

- Rental — With a single booking, the passengers get cabs at their disposal for as long as they want and travel to different destinations. In this package, there will be a fixed fare for each plan depending on the time and travel designated. If the time or distance exceeds the package limit, the nominal additional charges will be charged, and the trip can be continued beyond the package limit. It avails passengers the options to book cab immediately or in advance.
- Outstation — The passengers can book cab for intercity travel whether it may be a one-way or round trip. For the one-way plan, the cab can be used up to 12 hours. If exceeds the time limit, the

Page 18
of 96

trip will be considered as a round trip. The time limit in this feature can be configured by the admin at the back-end (either 12 or 24 hrs). The trip fare can be varied depending upon the selected

vehicle model. If the time or distance exceeds the package limit, the nominal additional charges will be charged, and the trip can be continued beyond the package limit. This package allows users to book cabs prior to the travel date or time.

The admin can add more package plans with varied options by clicking on the “Add” button in the top-right corner.

	To add a new package plan, you have to select the package type. Then, fill up all the required fields with appropriate information. Finally, click on the “Submit” button.
---	---

If you want to edit any particular package plan, you can do so by clicking on the “Edit” button in the “Action” column.

	
	Make necessary changes in the “Edit Subscription Plan” form and press the “Submit” button.

The vehicles assigned to drivers are listed here. The admin can set the number of days/hours a vehicle is being assigned to a particular driver, and can also modify or extend the days by clicking on the “Edit” button in the “Action” column.

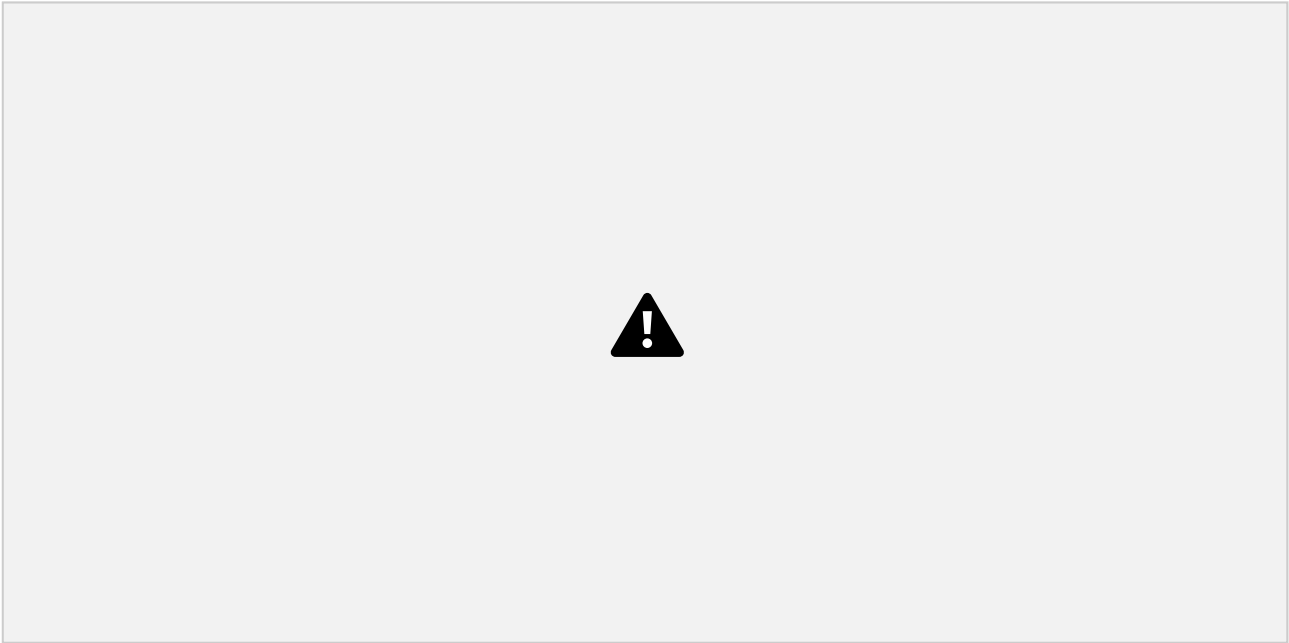

Vehicles can also be assigned manually to drivers by selecting from the list of vehicles and providing the required information.

	Update the required fields with relevant data and click on the “Submit” button.
--	---

The report can be downloaded in XLS or PDF format by clicking on the “Export” button on the top-right corner.

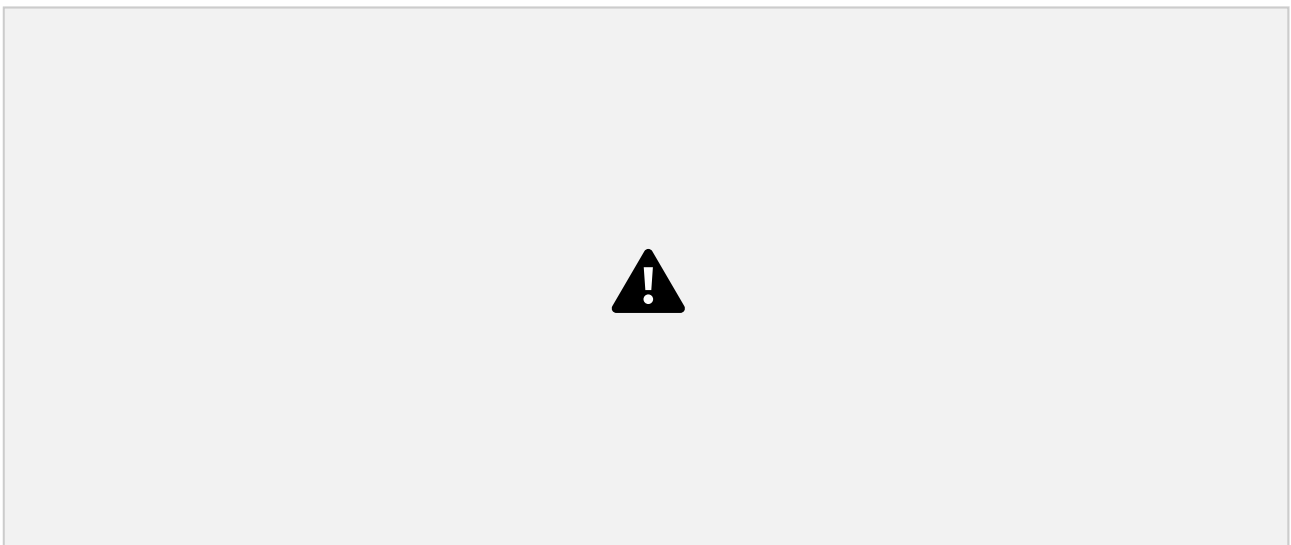

4.3 Workforce

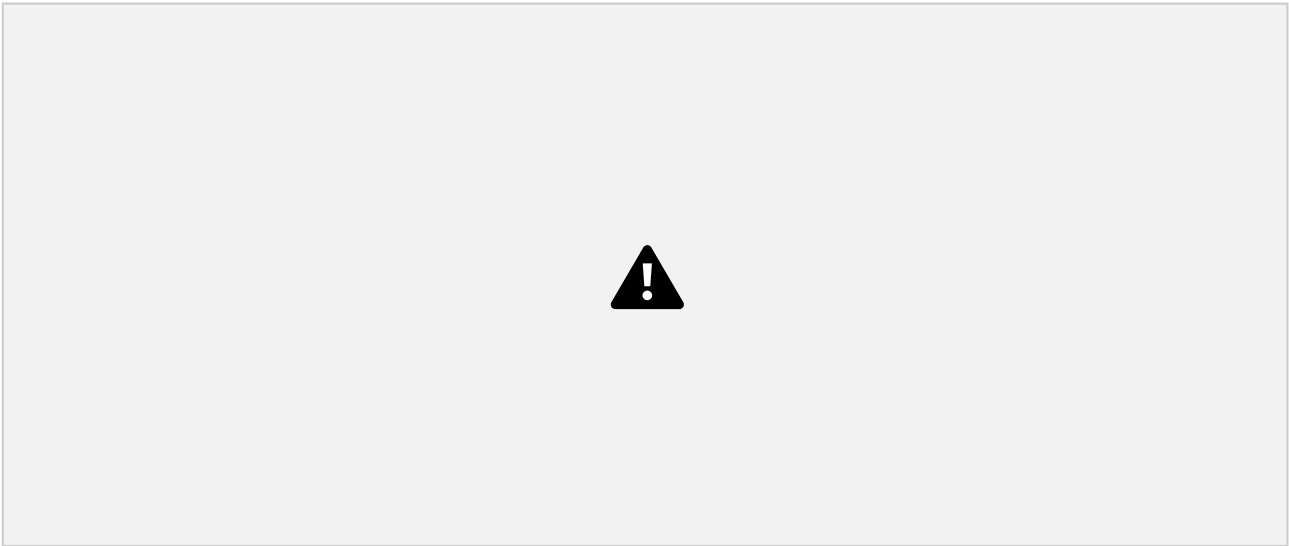

Manage dispatchers

The details of each taxi dispatcher are listed here. By clicking on the dispatcher name and company name, you can get the detailed report of dispatcher and company, respectively.

Dispatcher details can be edited and modified according to relevancy by clicking on the “Edit” button in the “Action” column.

	The admin can make changes in the “Edit Manager” form and click on the “Submit” button to save changes.
--	--

The admin can include any number of dispatchers by clicking on the “Add Dispatcher” button in the right corner.

To add a new dispatcher, the admin has to fill up the “Add Dispatcher” form with the required details such as name, address, country, state, city, contact, and company details.

Manage drivers

Information on each driver can be edited and modified as per the discretion of the admin. On clicking the image of the driver, a more elaborate report including the status, transactions, trip statistics, and shift history is displayed. The admin can import fleet list or export details using the respective buttons in the top-right corner. The drivers with the driver wallet amount below the fixed minimum amount are highlighted in yellow in the list.

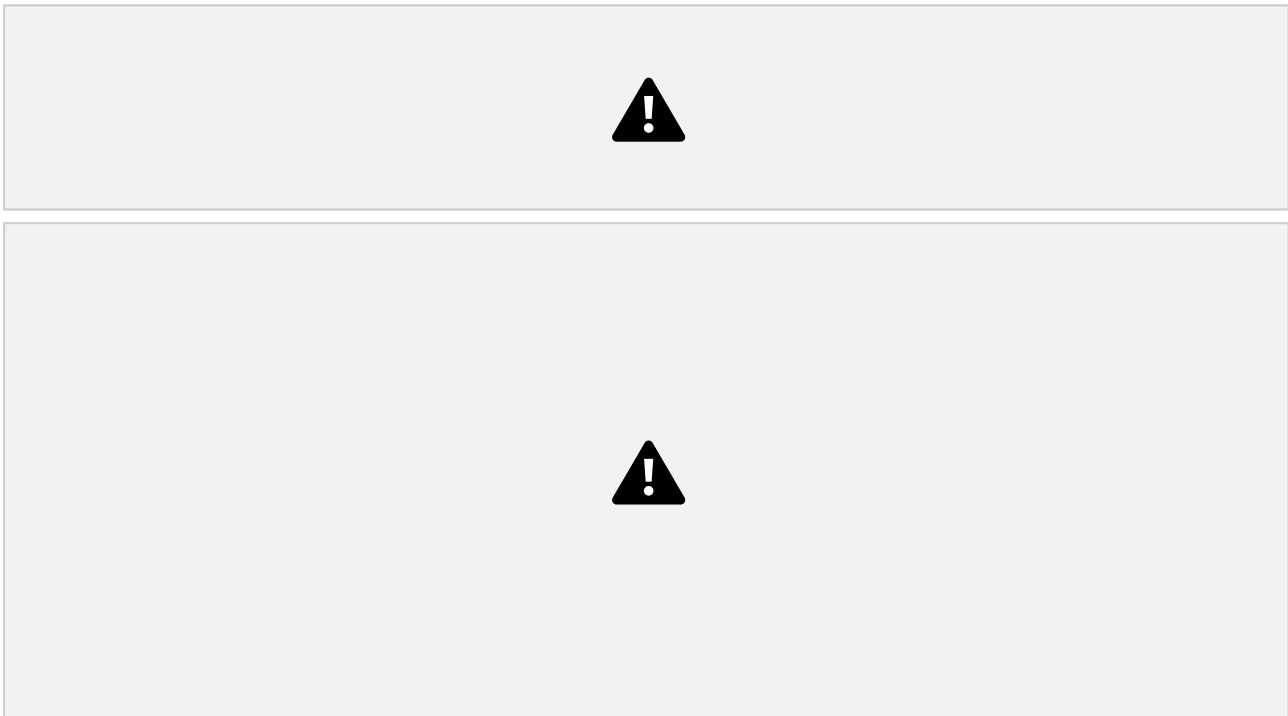

The “Driver Type” drop-down will enable the admin to filter search results based on commission- and subscription-based drivers and manage driver info.

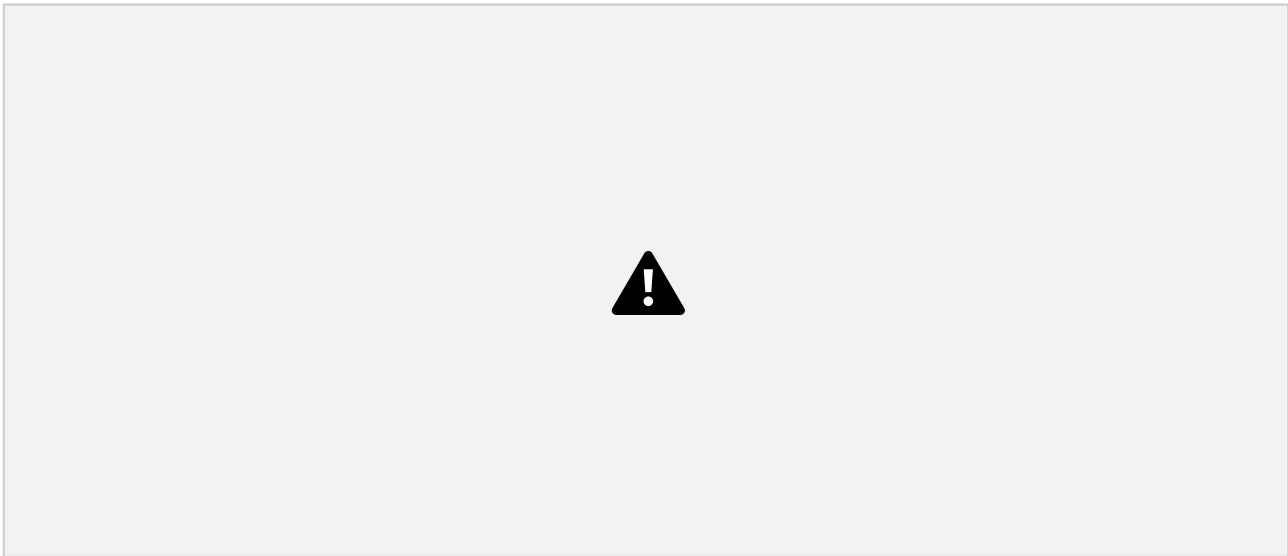

On clicking the name of the driver, the admin can get the complete report of the driver and view the current status of the driver with the location and the time last updated.

The admin can also view the progress of the ongoing journey. In cases when the driver's mobile get switched off during the ride, the driver can inform the admin who can then force completion of the ride by manually providing the drop-off location, distance, and ride fare.

Information on each driver can be edited or modified as per the discretion of the admin simply by clicking on the “Edit” button in the “Action” column.

	Edit the selected driver details such as personal information and all of their identity credentials. Once done with the editing process, click on the “Submit” button to save the changes made.
---	--

By clicking the “Recharge Money” icon in the “Action” column, the admin can recharge the driver wallet with a certain amount. When the driver receives the ride fare in cash from a passenger, the commission for the admin will be deducted from the wallet. If the passenger pays through the card, the driver commission will be added to the driver wallet.

The admin can add more drivers by clicking on the “Add Driver” button in the top-right corner.

The admin can add any number of

drivers to the list including personal information and all of their identity credentials with the photo and driving license details to increase credibility and safety during a trip. The admin can select the brand for each driver as multi or single. In multi brand, the driver operates under a particular fleet company. In single brand, the driver operates directly under the master admin.

Manage subscription plans

The details of companies and their subscription plans can be tracked from the list using keyword search that can also be edited or modified.

As per the discretion of the admin, the subscription plans can be edited or modified by clicking on the icon in the Action column.

Make necessary changes in the “Edit Subscription Plan” form and press the “Submit” button to save changes.

The admin can add new subscription plans by clicking on the “Add” button in the top right corner. The button will redirect you to a page where the admin has to enter all the required details of the plan and press the “Submit” button to create it.

	Update the new plan details in the “Add Subscription Form” and click on the “Submit” button.
---	--

Driver ratings

Passengers can rate your drivers. Such details will be listed here for the reference of the admin. By clicking on the "View Details" icon in the "Action" column, the admin can view the individual driver's rating report.

Driver wallet

A display of the driver wallet with the company name and the amount of withdrawal from the wallet is Page

provided with the requested date and time. On the request being either rejected or approved, the status is changed accordingly. The report can be downloaded in XLS or PDF format by clicking on the “Export” button on the top-right corner.

5. Dispatcher

5.1 Dashboard

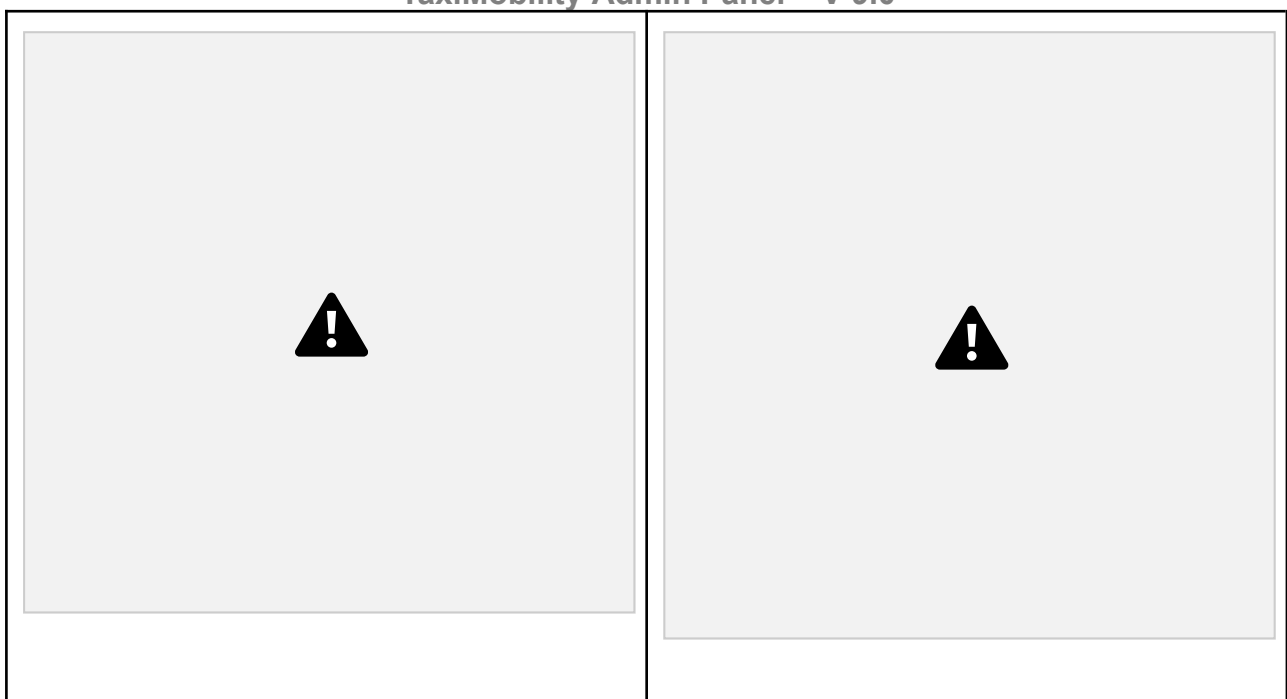

The dispatcher dashboard presents an overview of all missed, rejected, or canceled bookings, payments through different payments modes, booking types, and the heatmap.

Bookings

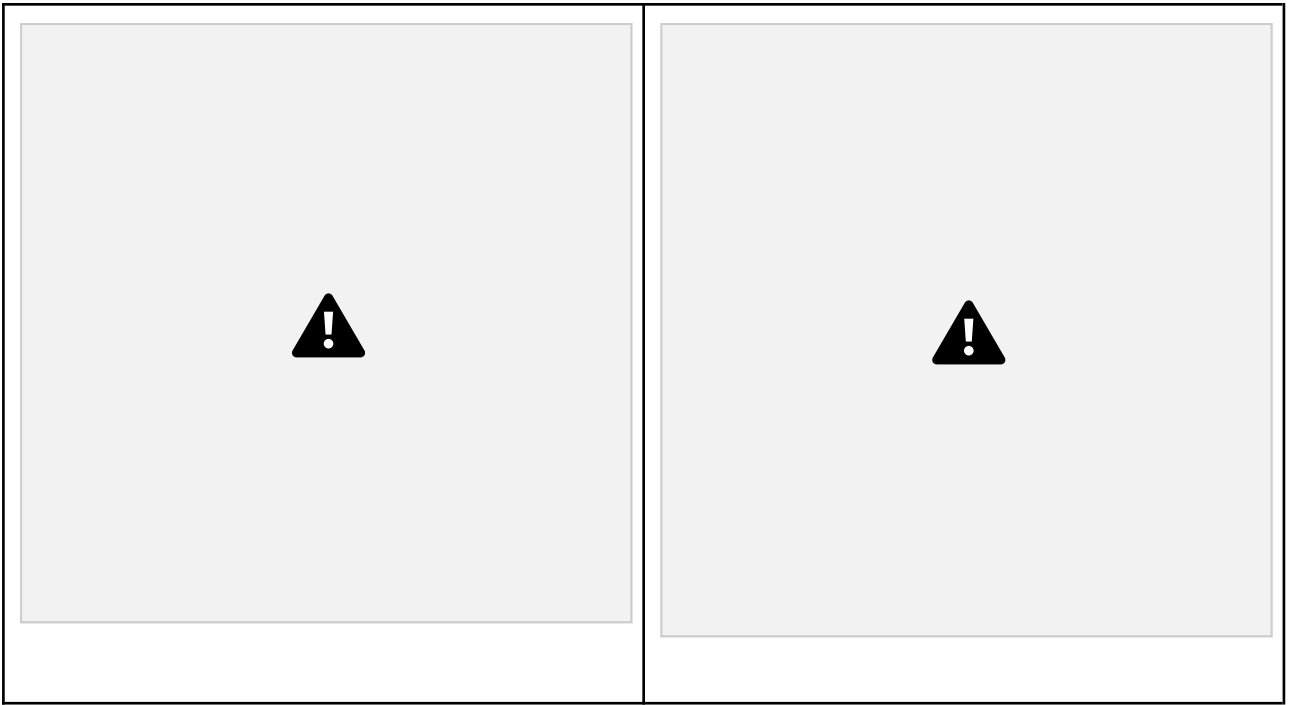

The graphical representation of the bookings displays the count of all completed rides. By clicking on the “Menu” icon, the admin can download the report in any of the defined formats.

TaxiMobility Admin Panel – V 9.0

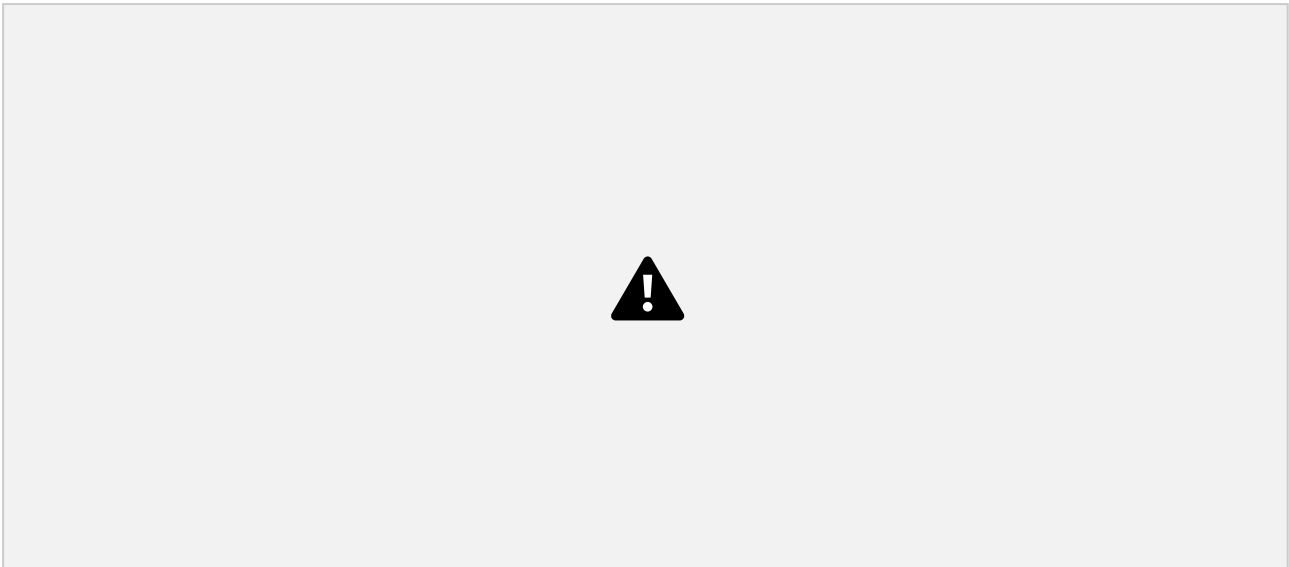

Missed bookings

The graphical representation of the bookings displays the count of rides missed due to either rejected by the driver or canceled by the rider. By clicking on the “Menu” icon, the admin can download the report in any of the defined formats.

Booking type and payment mode

Bookings done via website, mobile app, street pickups, and call centers are displayed individually. The filter option can be used to get the data for a particular date or time.

By clicking on the “Menu” icon, the admin can download the report in any of the defined formats.

Payment mode

The number of payments received through referral programs, promotions, card and by cash are also indicated. The filter option can be used to get the data for a particular date or time.

By clicking on the “Menu” icon, the admin can download the report in any of the defined formats.

Booking heatmap

The booking heatmap indicates the location with the highest booking rate.

Refined filter and search capabilities based on vehicle/booking/driver status and vehicle model enable admin to view and manage vehicle status, and assign or reassign a ride for on-demand or scheduled bookings. The admin can also view live tracking with vehicle movements.

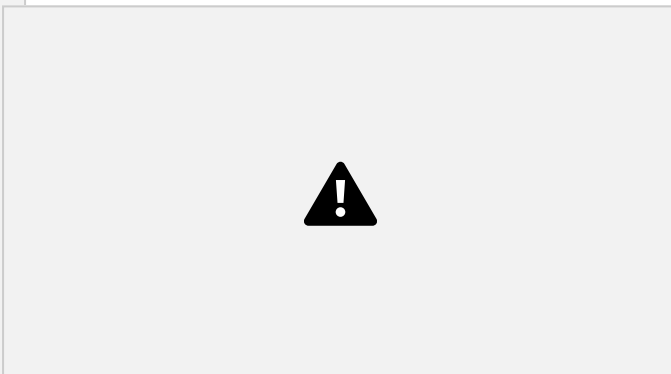

Page 37 of 96

TaxiMobility Admin Panel – V 9.0

Admin can manually add a booking by providing the passenger information, location details, date, and time, and by selecting the vehicle from the drop-down list.

The admin can also view the details of an already assigned booking using the search option.

5.3 Manage Bookings

The admin is provided with the facility to view and manage all taxi bookings of all taxi companies in a single platform. It allows to add bookings, showing bookings done by passengers (including Ride now, Ride later), and displays the number of vehicles assigned and reassigned, rides confirmed, rides in progress, rides completed, rides canceled, and the pending payment details, in addition to all other booking details for each ride.

TaxiMobility Admin Panel – V 9.0

If a booked trip is canceled, the admin can reassign vehicle and driver for the trip manually or automatically.

If any of the trips is yet to be dispatched, you can click on the “Dispatch” button in the “Action” column to assign cab manually or automatically. You can also cancel the trip that are yet to be assigned by clicking on the “✕” icon in the same column.

5.4 Fleet Dispatch Settings

The dispatch settings is used to set the dispatch type as auto or manual. Notification will be sent to the driver based on the dispatch settings.

- **Auto** – Automatically assigns the trip to free drivers.
- **Manual** – It shows the available drivers to assign the trip.
- **Auto & Manual** – At the time of each trip dispatch, the system will ask to choose any one of the options.

In scheduled or advance booking, the admin can set the time interval between the time at which a notification to accept the ride request is sent to the assigned driver and the scheduled pickup time.

6. Revenue

6.1 Dashboard

The dashboard manifests the average revenue received per user, per trip, and per fleet. The average revenue received through cancellation of rides is also provided here.

Revenue graph

Revenue graph shows the number of rides and the respective earnings for the month. The filter option allows viewing the details of the selected dates.

User average revenue graph

The graph renders the average revenue received per user with the trip count.

Revenues vs. expenses

The graph below segregates revenues and expenses for each day.

Missed revenues

The revenue missed from the rides either rejected by drivers or canceled by passengers is represented in the graph below.

Payments by company

Revenue generated from payments received through referral programs, promotions, card, and by cash is indicated here. The filter option can be used to get the data on a particular date and time.

Commission and subscription revenue

The graph shows the representation of the total revenue received from commission and subscription plans.

6.2 Transactions

A report of all transactions made by each company is listed here with the ride details including pickup and drop-off locations, passenger name, date, transaction ID, and so forth. The transaction details can be filtered by trip type to view details of normal, rental, or outstation trips.

6.3 Expense Management

Expense category

The admin can set categories like rent, salary, and so on for the expenses in the back-end and can also add

Page 44 of

96

new expense category by clicking on the “Add” button in the top-right corner. The categories can be edited or

modified by pressing the “Edit” icon in the “Action” column.

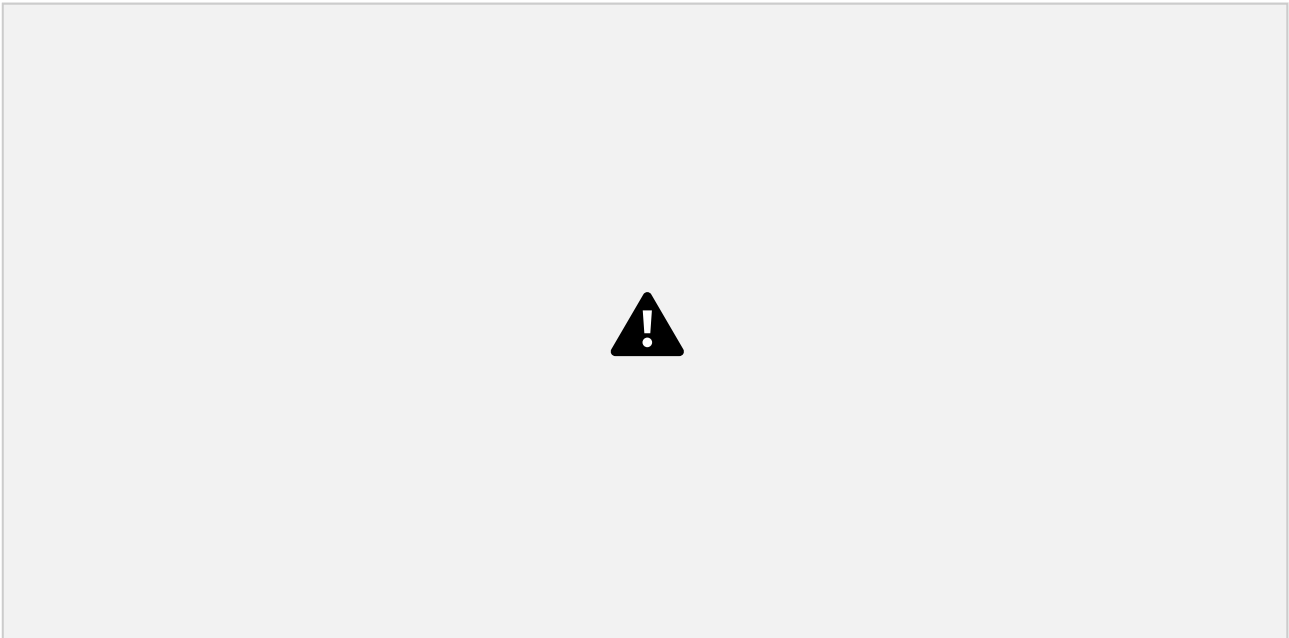

Manage expenses

Admin can group the expenses based on the categories set in the back end and download the data in the preferred format for any further reference or delete it by clicking on the respective icons in the “Action” column. The admin can also add new expense category by clicking on the “Add” button in the top-right corner. The categories can be edited or modified by pressing the “Edit” icon in the “Action” column.

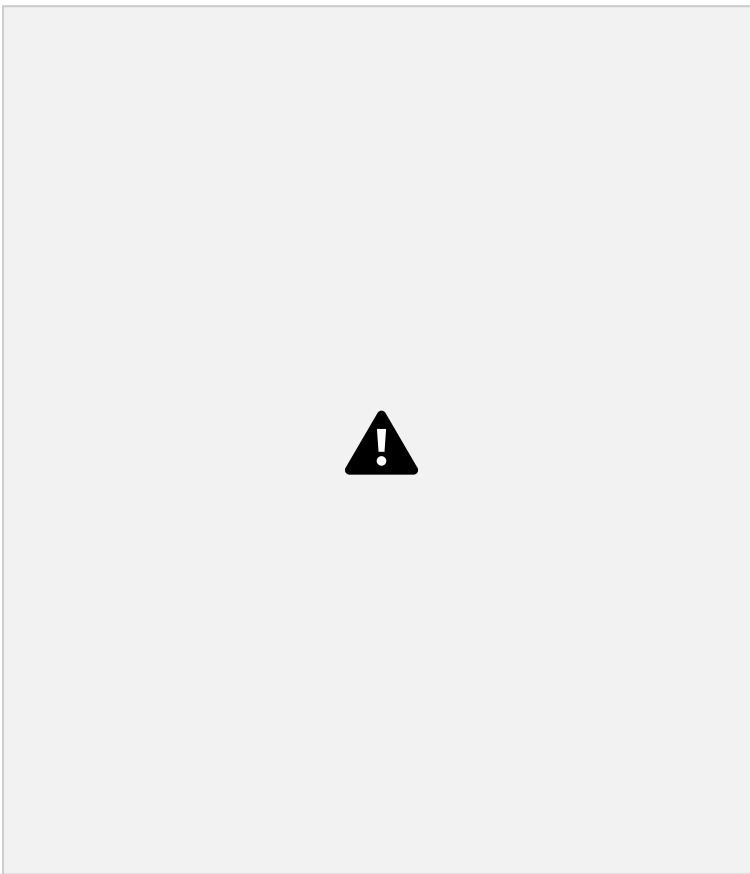

Payout

Payout details can be reviewed here. The withdrawal requests by drivers are tabulated with the company they belong, requested date, withdrawal amount, and the status of the requested. You can search based on the status of the payouts whether it is approved, or yet to be approved, or even the denied.

To view any withdrawal request in detail, you have to click on the icon in the “View” column.

7.1 Dashboard

A brief overview of all user activities and revenue generated from user campaigns is displayed here.

New user sign up

All user registrations received through promotions/campaigns for each day are shown in the New User Signup graph.

User activity

All campaign-based user activities including the number of logins, registrations, and bookings are given below.

TaxiMobility Admin Panel – V 9.0

Revenue

The revenue graph represents the number of campaigns and the revenue generated from each campaign per day.

7.2 Campaigns

In the campaigns page, you can access the complete history of the previously run campaigns. Click on the campaign name to view the complete details of any particular campaign.

TaxiMobility Admin Panel – V 9.0

If you want to edit any campaign, you can do so by clicking on the icon in the Edit column. It will be redirected to a form-filling page where you have to provide all the required information and submit the form.

You can also add new campaigns by clicking on the “Add Campaign” button. It will take you to a form-filling page where you have to provide all the required information and submit the form. The newly added campaign will appear in the list.

TaxiMobility Admin Panel – V 9.0

The admin can add and manage promotional campaigns in the back end providing the code, notification type, start date, and expiry date. Automated notifications will be sent to the selected users as SMS, email, or push notification based on the selection.

Promo codes can be sent to a new user or existing users and can set the discount amount, usage limit, and validity in the back end. The admin can also send bulk SMS and emails. The count of the SMS and emails depends on the third-party service provider like Sendgrid for emails.

7.3 Templates

The templates for the promotions can be set in the back end depending on the purpose and users. By clicking on the title of the template, you can access the complete details of the selected template and make changes if necessary. The admin can enable or disable the template as and when required.

TaxiMobility Admin Panel – V 9.0**7.4 Consumers****Manage consumers**

In the consumers' page, you can get the passengers' list and complete data of each passenger. You can search them by keyword or by status. You can also edit the profile of the passengers.

If you click on the name of the consumer, you will be getting to access the individuals' usage details, consumer report, and trip history.

Such passenger data can be downloaded in Excel or PDF format by clicking on the "Export" button in the top-right corner. Any amount of passenger data can also be imported from your existing database that must be in supported file format.

Click on the “Edit” icon in the “Action” column to edit passenger information.

TaxiMobility Admin Panel – V 9.0

All passengers who are registered with the application are listed with particulars such as their name, email id, phone, referral code, wallet amount, and the date of registration. The consumer profile can be edited as required.

The admin can import files to the database. While importing, the admin will be notified of any errors such as invalid phone number or email ID.

TaxiMobility Admin Panel – V 9.0

The report can be downloaded in XLS or PDF format by clicking on the “Export” button on the top-right corner.

Consumer wallet log

A passenger's wallet with the name, phone number, wallet amount, and the payment type is cataloged for further reference. The report can be downloaded in XLS or PDF format by clicking on the "Export" button on the top-right corner.

8.1 Dashboard

Analytics dashboard displays all data in a single platform for the admin to take improved decisions. It is the consolidation of all the information which includes the graphs representing fleet availability, driver unavailability, bookings, missed bookings, booking type, payment mode, revenue, average revenue per user, revenues vs. expenses, missed revenues, revenue from campaigns, and user activity.

8.2 Reports

You can generate reports for almost all business processes here and can also download such reports in the Excel or PDF format for further use by clicking on the “Export” button in the top-right corner.

Transaction history

A report of all transactions is listed here by name of the company, vehicle, driver, and passenger with the location and date. It displays the logs and statistical information on all completed and canceled transactions.

The search can be filtered by using the filter icon in the top-right corner.

Expenses history

The details of all expenses are listed with the reason for the expense, the category in which it is included, expense amount, and the date.

Consumer report

The particulars of all passengers who are registered with the application are listed with their name, email id, phone, referral code, wallet amount, and the date of registration. The search can be filtered by using the filter icon in the top-right corner. The complete report about the consumer can be derived by clicking on the name of the consumer. Likewise, the report can be downloaded using the “Export” button in the right corner.

Fleet report

Here, the admin can view the list of all vehicles with detailed information including the vehicle number, the owner companies, vehicle types, and models. Use the keyword search to locate the data on any vehicle more conveniently. The search can be filtered by using the filter icon in the top-right corner. The complete report about the vehicle can be derived by clicking on the fleet number. Likewise, the report can be downloaded using the “Export” button in the right corner.

Driver report

Information on each driver is listed with an elaborate report including the status, transactions, trip statistics, and shift history. The search can be filtered by using the filter icon in the top-right corner. The complete report about the driver can be derived by clicking on the driver name. Likewise, the report can be downloaded using the “Export” button in the right corner.

Company report

The admin can include any number of companies to the list with particulars such as name, address, country, state, city, company images, time zone, and the other relevant details. Personal information including email, password, mobile number, and address can also be recorded here. The search can be filtered by using the filter icon in the top-right corner. The complete report about any particular company can be derived by clicking on the company name. Likewise, the report can be downloaded using the “Export” button in the right corner.

Consumer logs

The passenger activities are listed here with the particulars such as user ID, login type, login date, and the activity. Here also you have search filter and export options.

User logs

The activities of all users including passengers, drivers, companies, and dispatchers are cataloged with the particulars such as user ID, login type, login date, and the activity. Here also you have search filter and export options.

9. Accounts

9.1 Payable

Details about the payables and receivables to/from companies will be displayed here with tax calculation.

TaxiMobility Admin Panel – V 9.0

By clicking on the company name, the list of drivers who drive under the company is displayed with their account details.

Again in the driver list, click on the driver name to view the driver trip details.

TaxiMobility Admin Panel – V 9.0

The status of the request will be reflected here:

9.2 Settlement Request

If at all there is any settlement request, it will be displayed here. The status of the settlement request (Pending or Approved) can be changed by using “Change Status” option in the bottom-left corner.

Page 62 of 96

TaxiMobility Admin Panel – V 9.0

9.3 Settlement History

The “Settlement History” report shows the list of settlement made and provides the payment information such as payment date, driver and company names, and the amount paid.

To view the detailed information about any particular settlement, click on the settlement ID and access the

history.

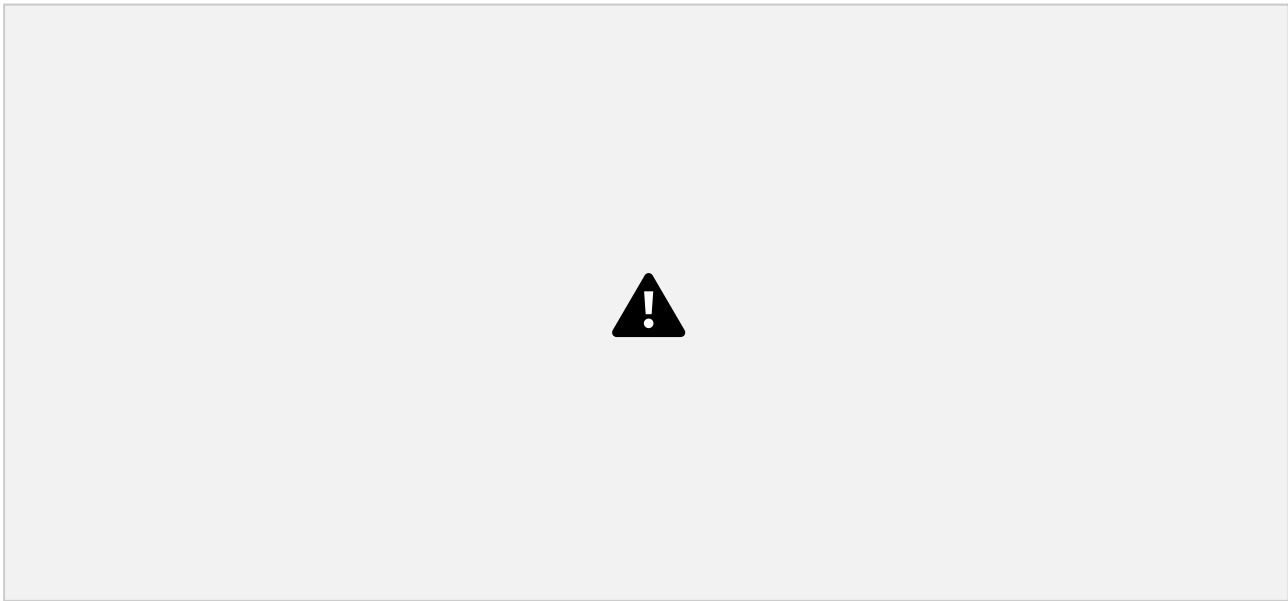

The “Settlement History” report can also be printed by clicking on the “Print” button in the top-right corner.

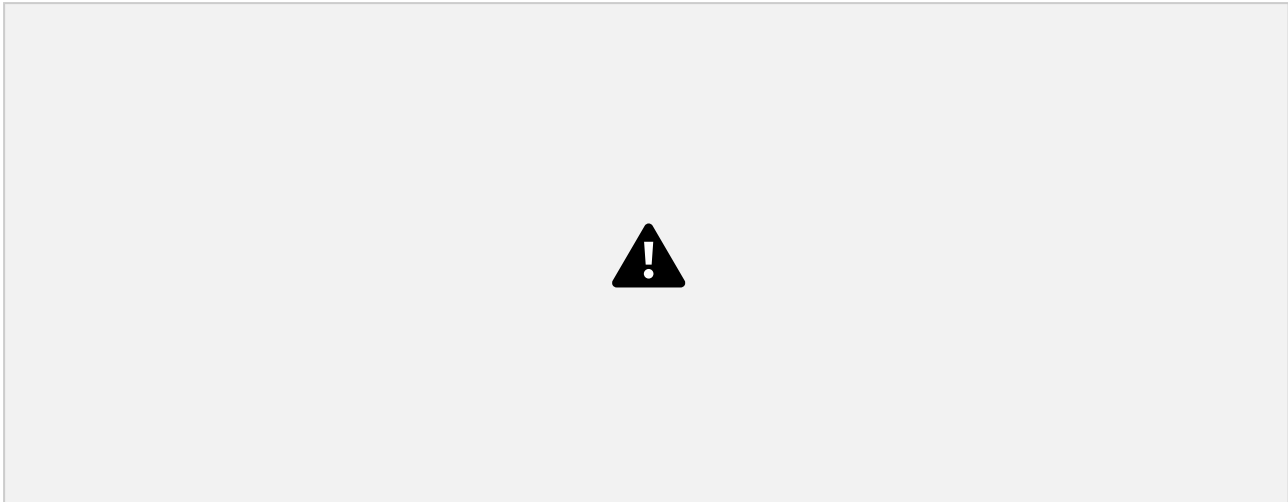

10. Zone Management

A list of zones will be displayed here.

Click on the “Edit” icon in the “Action column to edit the zone.

Once you are done with the editing, click on the “Submit” button to save changes.

TaxiMobility Admin Panel – V 9.0

The admin can add any number of zones by clicking on the “Add Geofencing” button in the top-right corner.

In the “Add Zone” form, you have to enter the zone title (1) and address (2). Then select the “Draw a

shape” (3) icon to draw the zone in the map. Then, enter zone-to-zone fare for each model (4). Finally, click on the “Submit” button (5).

11. SOS

11.1 SOS History

The administrator can access the SOS history with the complete details of the emergency situations called from passenger and driver apps.

12. Settings

12.1 Site Settings

Site settings allow the admin to modify content visibility and rating anonymity as per their preferences, with provisions to edit the name of the site, description, tag, email id, currency, and so on. The trip fare is set

Page 68 of 96

TaxiMobility Admin Panel – V 9.0

either by admin or taxi companies.

The drivers are given 20 seconds, set by default, to accept a passenger request. This **Notification time** can be modified based on the preferences of the dispatchers. Idle or inactive user sessions will be automatically timed out to improve system security. The **idle time** can be set in the back end.

There is a provision to record a **message** and automatically send the recorded message to a friend or company **referral**. The admin can also add **meta keywords** and **meta description** for easy search, and can choose to enable or disable SMS facility that notifies users via messages.

The distance covered by a taxi can be calculated either in kilometers or miles, and the minimum distance can be set as per preference, and these can be edited in the '**Default Units**' and '**Default Miles**' settings respectively.

The companies can either give their users the option to pay by cash and credit **card** or just by **cash** by enabling or disabling the facility using 'Skip credit card'. It is at the discretion of the company whether to charge the users with a cancellation fee for every ride that is canceled.

The taxi fare is either set as '**Admin fare**' or '**Company fare**'. The fare set for each vehicle type by admin is common and same for all taxi companies, and the fare set by a particular taxi company is based on its own preferences. The fare can be calculated based on the distance covered by a taxi, or considering the distance and the time, or just by the time taken to complete the ride.

Application language can be set by **select language**

option, which will be reflected in both web and mobile apps.

Tooltip is provided with information about each item being hovered over. If the admin enables the '**Referral Settings**', users earn a bonus for each referral, which is set as 'Referral amount'. The referral program can also be enabled for drivers, similarly.

There is the facility to credit a certain amount of money to the **wallet** for easy and quick transactions during future rides. The first three choices are set by default, including the minimum and maximum amount that can be credited, as 'Wallet amount 1', 'Wallet amount 2', and 'Wallet amount 3' to click and choose from any of the three. There is also an option to modify the range of amount as preferred, for instance, 5-150. In this case, the minimum amount that can be added to the wallet is 5 and the maximum is 150.

The admin can record the **site** name, site, tagline, and contact details such as

TaxiMobility Admin Panel – V 9.0

email address and phone number for the site. The number of pages to be displayed at a time can be modified as preferred, in the **Pagination settings**.

be visible to the passengers even after the wallet amount goes below the minimum amount by selecting either 'Enable' or 'Disable'.

The multi-model dispatch option can be enabled or disabled in the back end. The passenger is availed with other options in vehicle types for the same fare if the requested vehicle is unavailable.

It is at the company's discretion whether to charge **tax** from users for the rides. The requests for taxi rides are prompted every 90 seconds by default. The time can be modified under 'Continuous request time'.

The APIs of Google Maps and options to incorporate the company logo, logo for email, and the company image are included in the site settings. The links to download the passenger and driver apps from the Android and iOS stores, and the links to the Facebook, Twitter, and Google+ pages are also provided. The admin can choose to either **Save the logs** or not of all user activities.

The admin can enable or disable the multiple-booking option to allow or prevent passengers to/from book cabs for others even when if he is on a trip.

Besides, the mode of receiving subscription reminder whether through email, SMS, or push notification has to be set here.

Set the grace time for drivers to be visible in the passenger app.

Socket/service option cannot be changed.

The visibility to Google **Maps** that locate taxis and drivers can be modified as viewable at both front end and back end, or only at the front end, or only in the admin panel. An admin fee can be generated automatically for each trip undertaken by a taxi company using the '**Admin commission**' option.

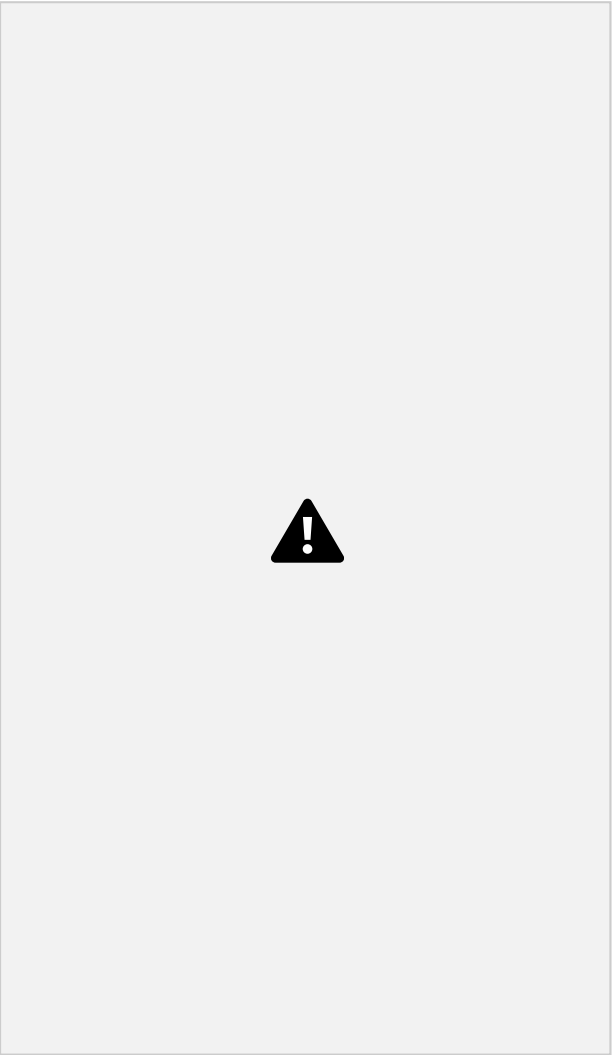

The Admin can recharge the driver wallet with a certain amount. When the driver receives the ride fare from a passenger in cash, the commission for the Admin will be deducted from the amount recharged in the driver wallet. If the passenger pays through the card, the driver commission will be added to the wallet. Once the amount in the wallet goes below the **Minimum wallet amount**, the driver will not receive any ride requests. Admin can also decide whether the driver should
If you are providing rental and outstation packages, then the respective options have to be enabled.

Likewise, you can set a duration for the one-way trip and outstation hours.
