1. Introduction

The dispatcher panel serves to manage orders under one roof for a quicker and more efficient taxi dispatch. The dispatcher panel is controlled by different company panels which is further governed by a master admin panel. The dispatcher panel allows dispatchers to accept booking, schedule trips, assign drivers and track payments.

2. Login

Login into the dispatcher panel using the provided login credentials. If the registered password is forgotten, the dispatcher can click the 'Forgot Password' option to receive the link to reset the password to the registered email id. Remember Me option is available in the login page to store the login details.

The image displays two side-by-side screenshots of the TaxiMobility Dispatcher interface. The left screenshot, titled 'Dispatcher Log In', shows a login form with an 'Email address' input field, a 'Password' input field with a 'Forgot?' link to its right, a 'Remember Me' checkbox, a 'Company Login' link, and a red 'Log In' button. The right screenshot, titled 'Forgot Password?', shows a form with an 'Email address' input field and a red 'Send' button.

3. Dashboard

Dashboard provides the statistical information on all key factors including the number of fleets, drivers, unassigned fleets, available fleets, unassigned drivers and live passengers, listed most precisely and accurately. All charts and graphs are provided with links to a more elaborate report of the information available in the particular chart or graph.

3.1 Current Status of Driver

The Map indicates the location and status of drivers as available, on trip, active or shift out with different pointer icons.

The Dispatcher can view live tracking with vehicle movements.

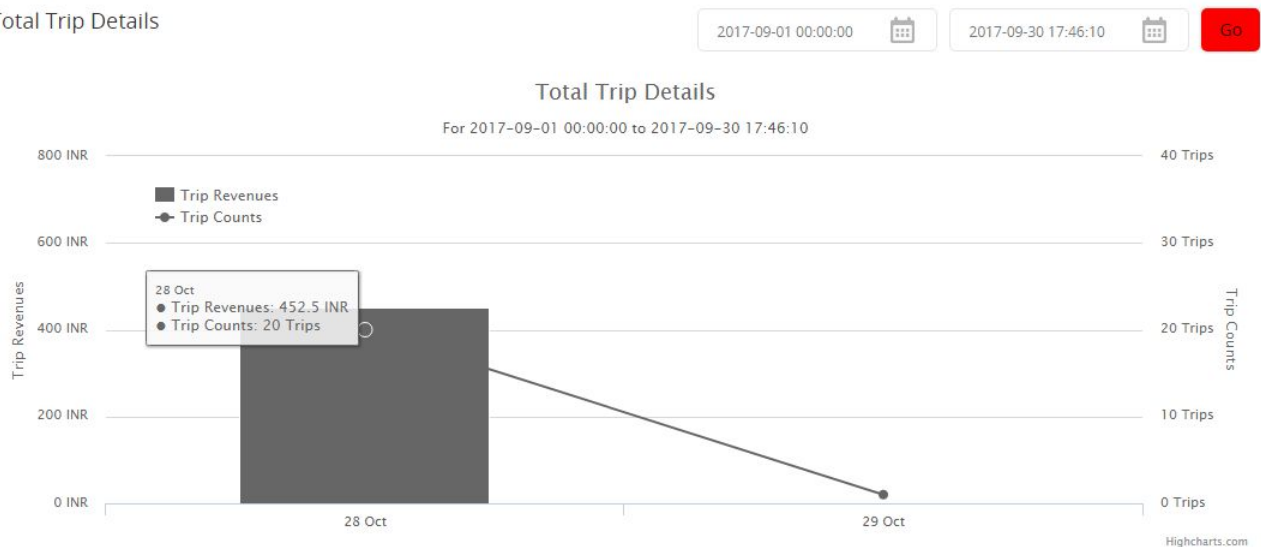

TaxiMobility Dispatcher – V 9.0

3.2 Total Trip Details

The graph indicates the number of rides and the revenue generated from the rides per month. It provides dispatchers with an outline of the total business growth.

Total Trip Details

3.3 Transactions

The number of rides undertaken per driver for the specified time interval is displayed with the trip count for each day. The filter option helps to view the details per driver by selecting the from and to dates in the calendar.

4. Dispatcher

4.1 Dashboard

The dispatcher dashboard presents an overview of all missed, rejected or cancelled bookings, payments through different payment modes, booking types and the heatmap.

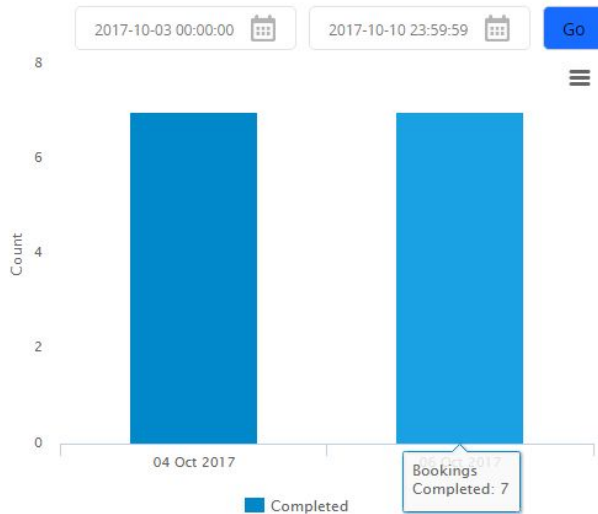

Bookings and missed bookings

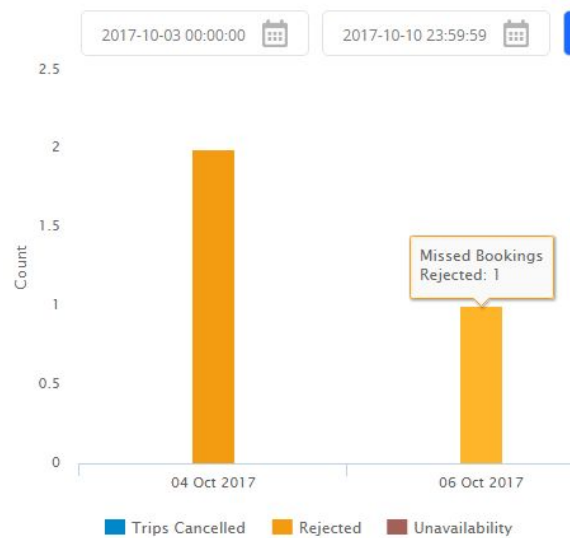

The dashboard displays the count of all completed rides and the rides missed due to either rejected by the driver or cancelled by the rider.

TaxiMobility Dispatcher – V 9.0

Bookings

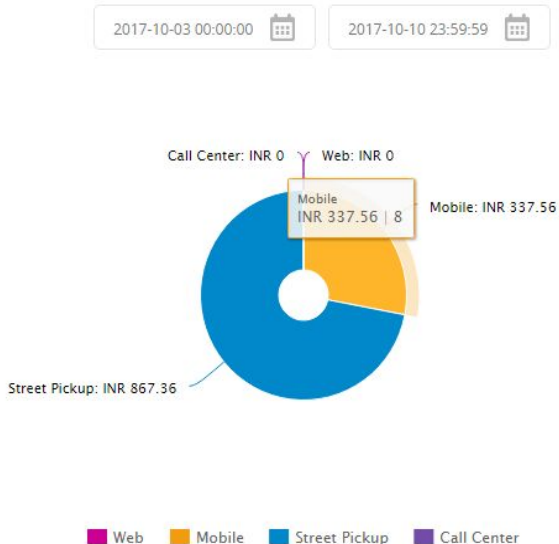

Missed Bookings

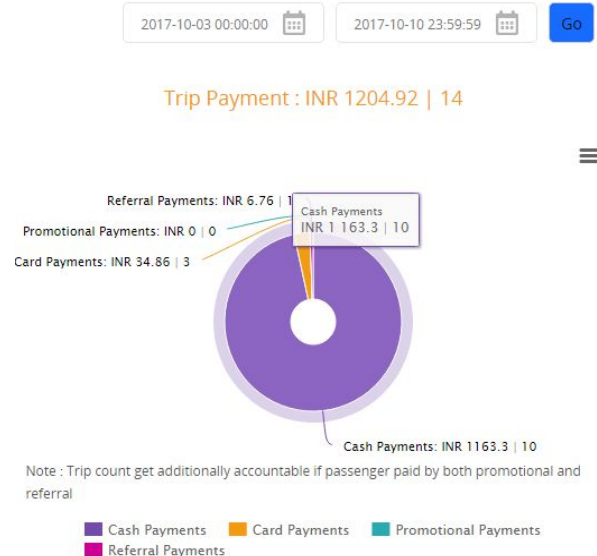

Booking type and payment mode

Bookings done via website, mobile app, street pickups and call centers are displayed individually. The number of payments received through referral programs, promotions, card and by cash are also indicated. The filter option can be used to get the data on the particular date and time.

Booking Type

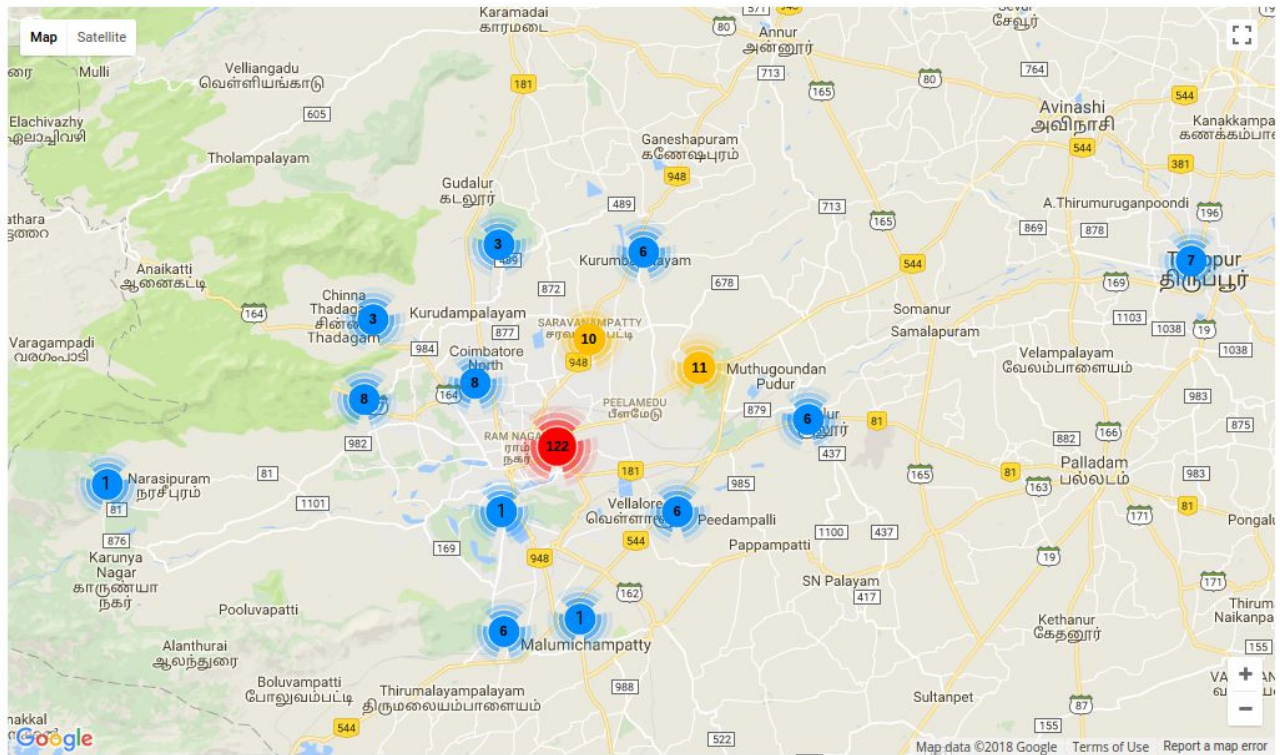

Payment Mode

Booking heatmap

The booking heatmap indicates the location with the highest booking rate.

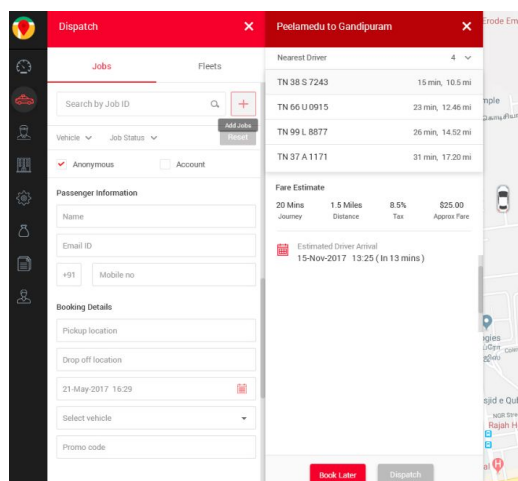

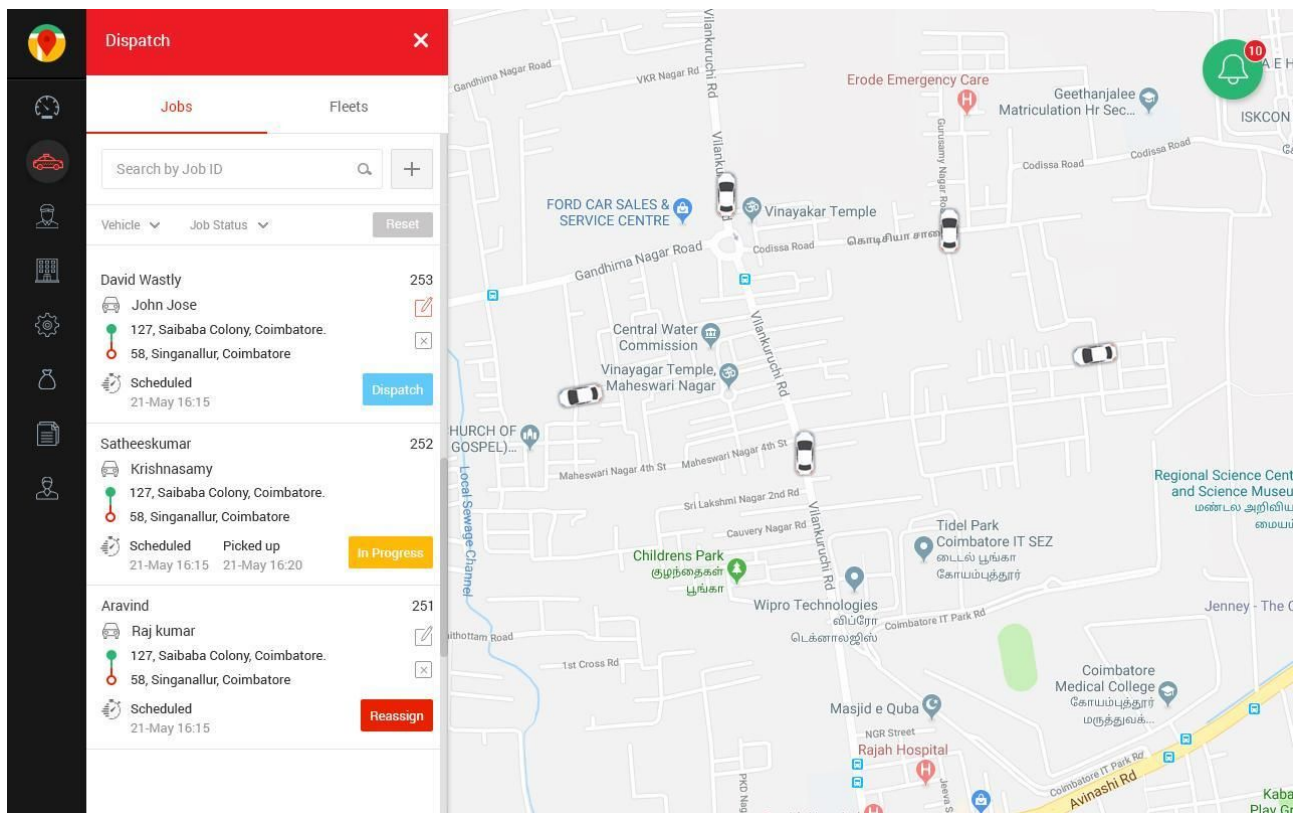

Booking Heat Map

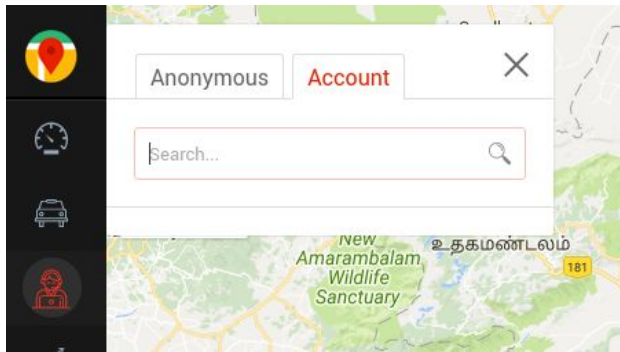

4.2 Dispatch

Refined filter and search capabilities based on vehicle/booking/driver status and vehicle model enables Dispatcher to view and manage vehicle status, and assign or reassign a ride for on demand or scheduled bookings. The Dispatcher can also view live tracking with vehicle movements.

TaxiMobility Dispatcher – V 9.0

Dispatcher can manually add a booking by providing the passenger information, location details, date, time and by selecting the vehicle from the dropdown list.

Dispatcher can also view the details of an already assigned booking using the search option.

4.3 Fleet dispatch settings

The dispatch settings is used to set the dispatch type as Auto or Manual. Notification is sent to the driver based on the dispatch settings.

Auto - Automatically assigns the trip to free drivers.

Manual - It shows the available drivers to assign the trip.

Auto & Manual - At the time of each trip dispatch, the system will ask to choose any one of the options.

In scheduled or advance booking, Admin can set the time interval between the time at which a notification to accept the ride request is sent to the assigned driver and the scheduled pickup time.

Fleet Dispatch Settings

5. Fleet Tracking

5.1 Dashboard

The Fleet tracking dashboard presents the statistics on fleets, fleet availability, idle running time, driver unavailability and bookings using graphs and vehicle heatmap. The Total Kilometers describes the total distance travelled by fleets during rides including the Empty kilometers. Empty kilometers describes the

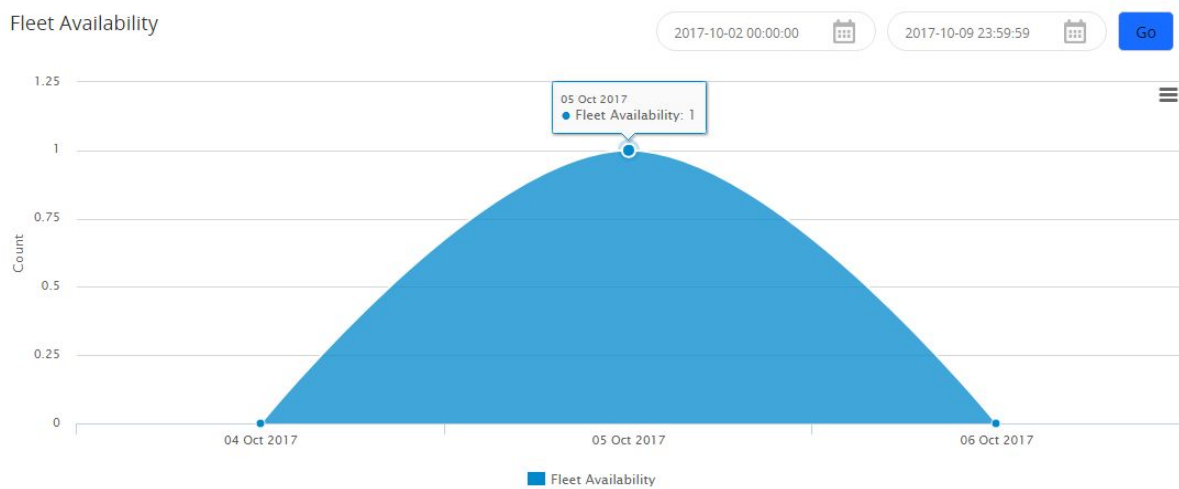

TaxiMobility Dispatcher – V 9.0

distance travelled empty to pick up a passenger and also without any ride.

Fleet availability

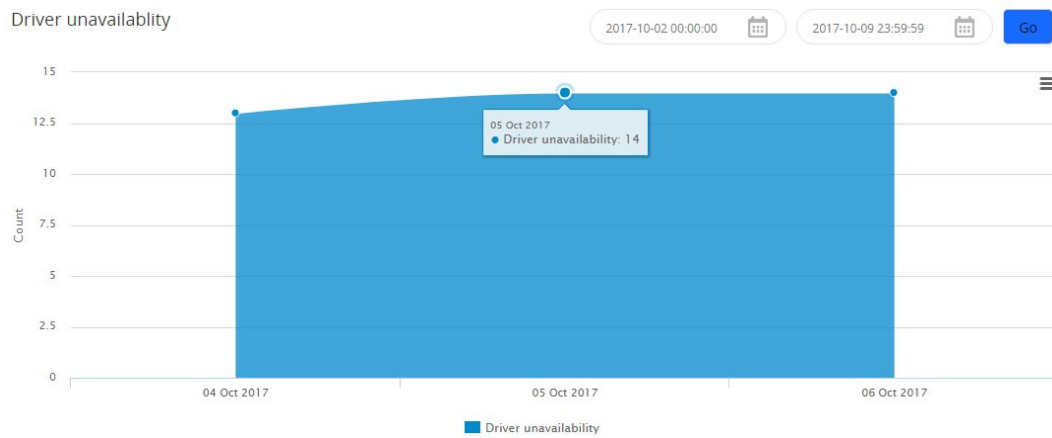

The Fleet availability graph indicates the count of vehicles that were available but did not receive any rides for the specified time interval. The filter option can be used to select the desired date range.

Driver unavailability

The number of drivers who were available but did not accept any passenger request for the specified time interval are represented through the graph below.

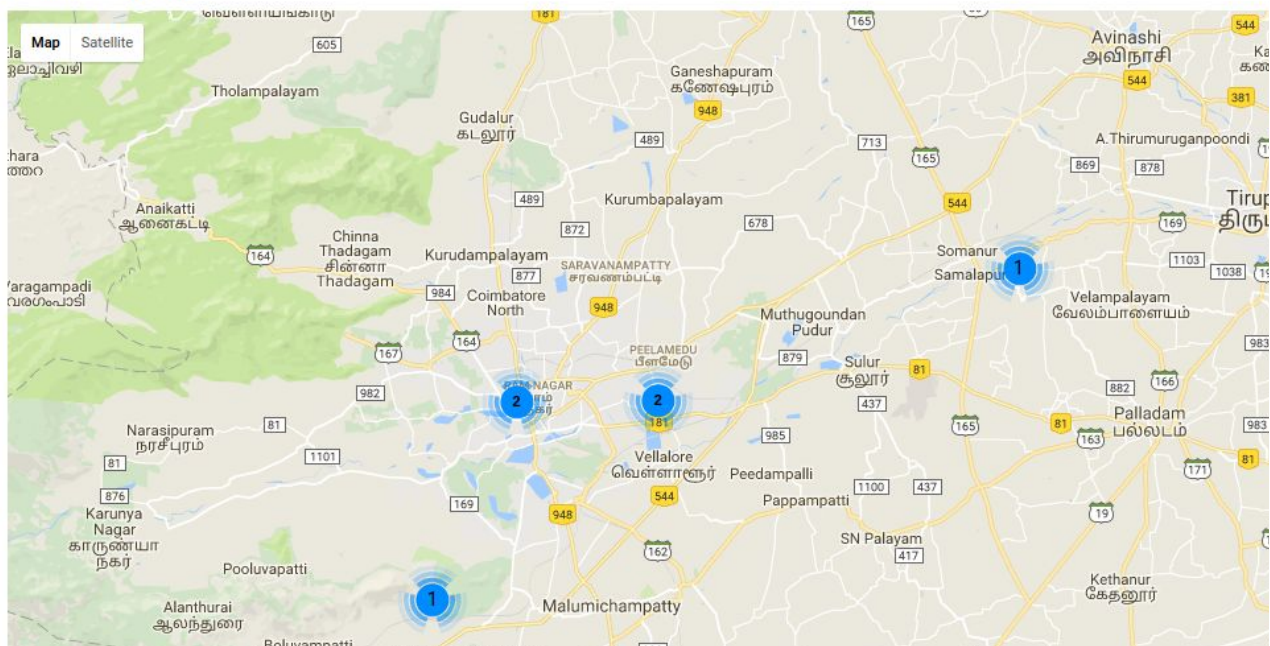

TaxiMobility Dispatcher – V 9.0

Vehicle heatmap

The Vehicle heatmap visualises the position of vehicles in a location, indicating the fleet availability in each area.

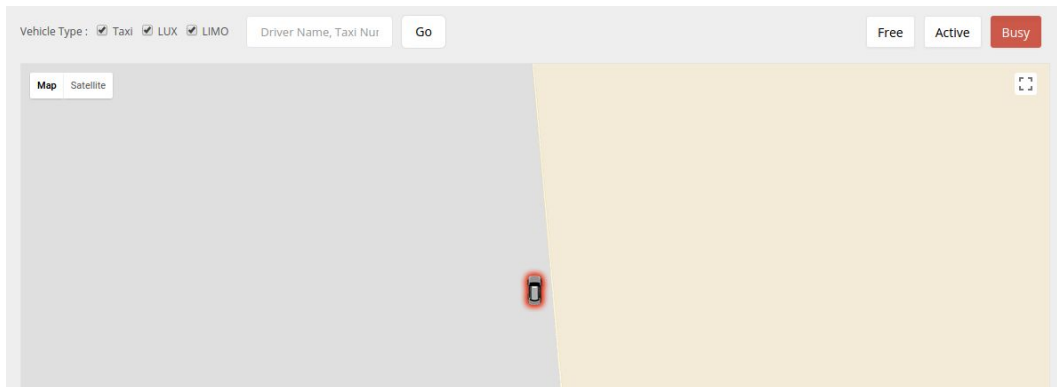

Vehicle HeatMap

5.2 Track

Dispatcher can track the vehicles by selecting the vehicle model, or individually by the taxi number or driver name. Dispatcher can also track the vehicle selecting the drivers by their status of availability.

TaxiMobility Dispatcher – V 9.0

5.3 Fleet Management

Fleets

Manage your fleet efficiently listing out the vehicles with detailed information including the vehicle number, the owner companies, vehicle types and models. Use the keyword search to locate the data on any vehicle more conveniently. Dispatcher can edit the fleet profile when necessary.

Package plan

The passengers can be rolled out with two ride packages that are Rental and Outstation.

- Rental — With single booking, the passengers get cab at their disposal for as long as they want and travel to different destination with single booking. If the time or distance exceeds the package limit, the nominal additional charges will be charged and the trip can be continued beyond the package limit. It avails the options to book cab immediately or in advance.
- Outstation — The passengers book cab for intercity travel. This package allows user to book cabs prior to the travel date or time.

Fleet can be manually assigned to drivers by selecting from the list of vehicles and providing the required information.

5.4 Workforce

Manage drivers

Information on each driver can be edited and modified as per the discretion of the admin. On clicking the image of the driver, a more elaborate report including the status, transactions, trip statistics and shift history is displayed. Dispatcher can import fleet list from any supported file or export details as required. The drivers with the driver wallet amount below the fixed minimum amount are highlighted in yellow in the list.

TaxiMobility Dispatcher – V 9.0

By clicking the wallet icon, Dispatcher can recharge the driver wallet with a certain amount. When the driver receives the ride fare in cash from a passenger, the commission for the Admin will be deducted from the wallet. If the passenger pays through card, the driver commission will be added to the driver wallet.

On clicking the name of the driver, dispatcher can view the current status of the driver with the location and the time last updated. The driver can log out any time to manage the status visibility.

Dispatcher can also view the progress of the ongoing journey. In cases when the driver's mobile get switched off during the ride, the driver can inform the dispatcher who can then force completion of the ride by manually providing the drop off location, distance and ride fare.
