1. Introduction

The company panel has a total control over all of its dispatcher panels, drivers, passengers, fleets and transactions. The details from all dispatcher channels are saved in the web-based company portal. The companies have the authority to add and manage dispatchers, drivers and fleets, access transaction details, account reports and user accounts, and view driver ratings, contacts and other details.

2. Login

Login into the company dashboard using the provided login credentials. If the registered password is forgotten, the company admin can click the 'Forgot Password' option to receive the link to reset the password to the registered email id. Remember Me option is available in the login page to store the login details.

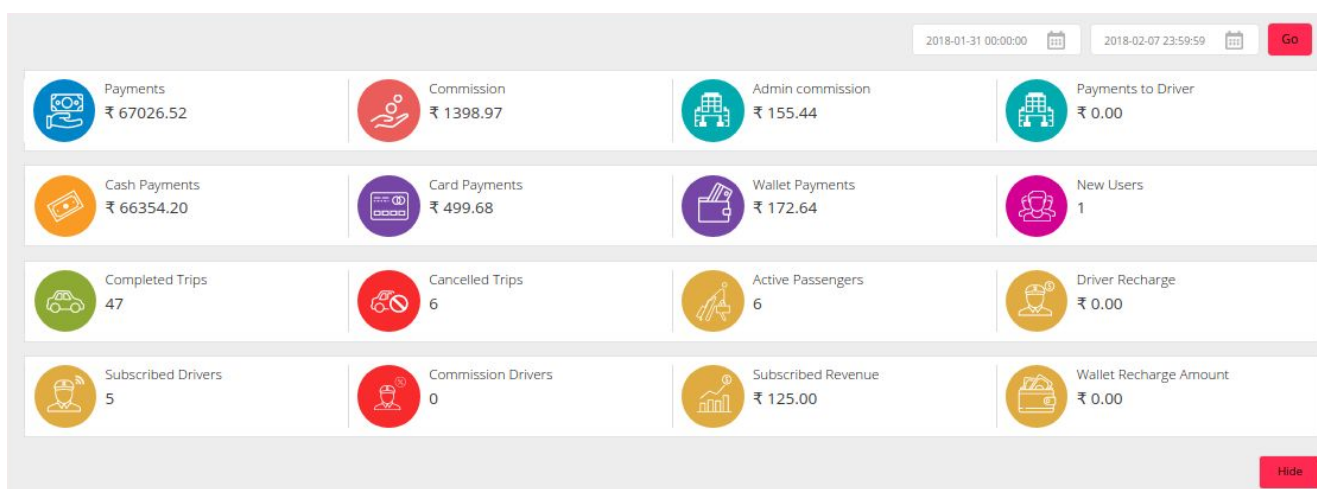

The image displays two side-by-side login forms. The left form, titled 'Company Owner Log In', features a text input for 'Enter the email address', a password input with a 'Forgot?' link, a 'Remember Me' checkbox, a 'Dispatcher Log In' link, and a red 'Log In' button. The right form, titled 'Forgot Password?', has a single text input for 'Email address' and a red 'Send' button.

3. Dashboard

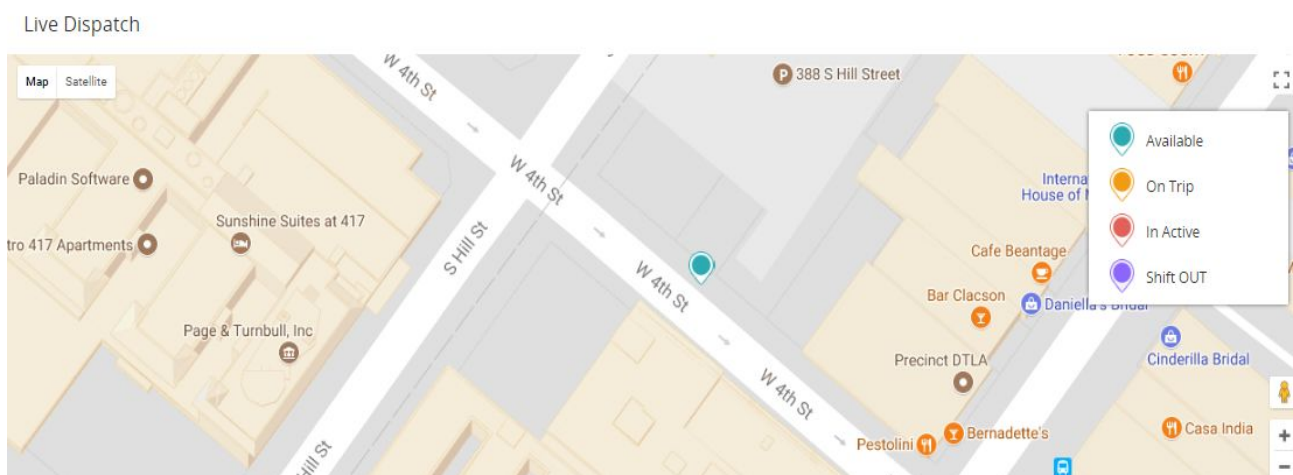

Dashboard provides statistical information on all key factors including payments, commission to admin, number of new users, rides, active passengers, cancelled rides, driver recharge amount and so forth, listed most precisely and accurately. All charts and graphs are provided with links to a more elaborate report of the information available in the particular chart or graph.

TaxiMobility Company – V 9.0

Live dispatch

The Map indicates the location and status of drivers as available, on trip, active or shift out with different pointer icons. The Admin can view live tracking with vehicle movements.

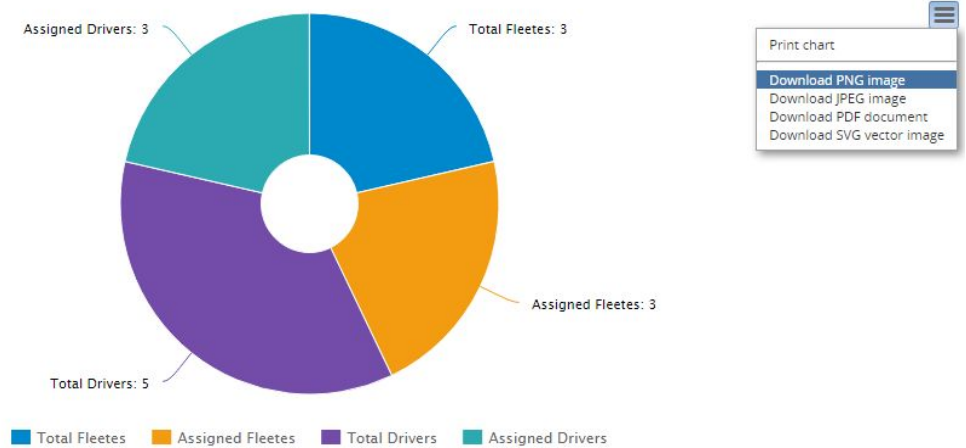

Assigned vs. unassigned assets

The graph displays information on the total number of fleets and drivers, and distinctively the count of assigned fleets and drivers.

TaxiMobility Company – V 9.0

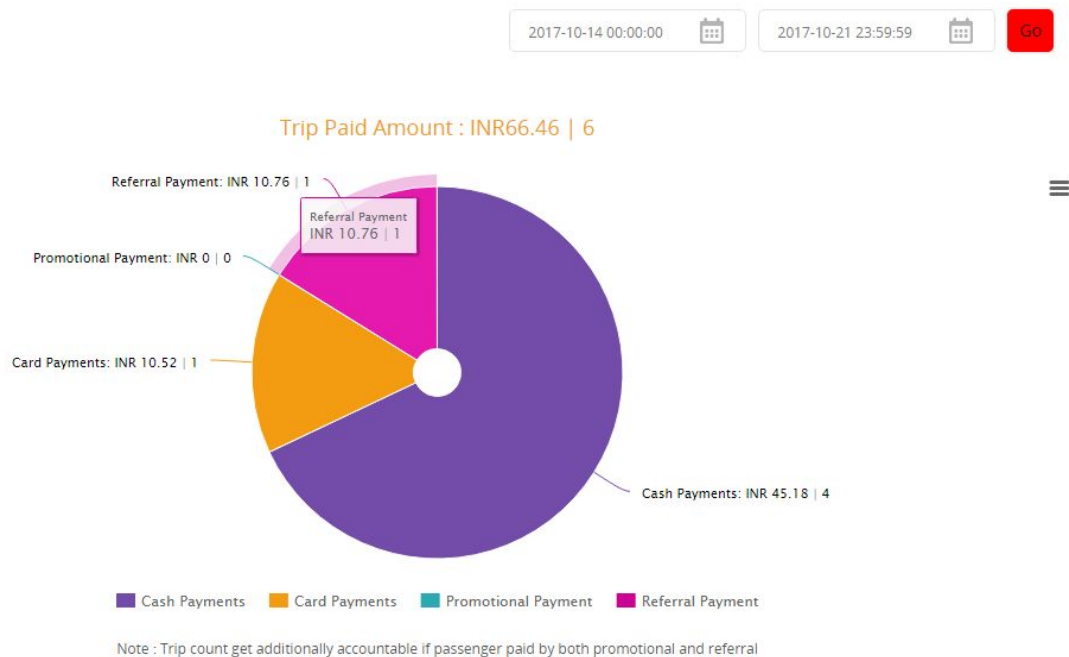

Assigned vs Unassigned Assets Today

Payments

All transactions made after the completion of rides are segregated indicating the amount as payments by trip, card, cash, and as payments through referral and promotional programs. These can be easily filtered searching by date and time.

Payments

Trip requests from city

The passenger requests from different cities are represented by a pie chart depending on the origin of passenger request. The details can be filtered using date, time or brand and can be exported in various file formats.

TaxiMobility Company – V 9.0

2017-10-21 23:59:59

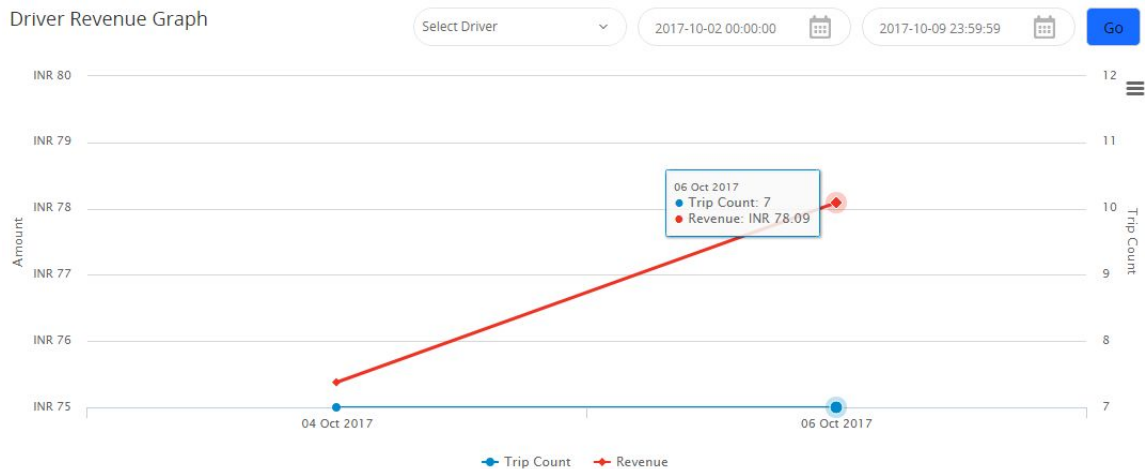

Go

Driver revenue graph

The revenue generated per driver for the month is displayed with the trip count and income for each day. The filter option helps to view the revenue details per driver by selecting the name from the dropdown and the from and to dates in the calendar.

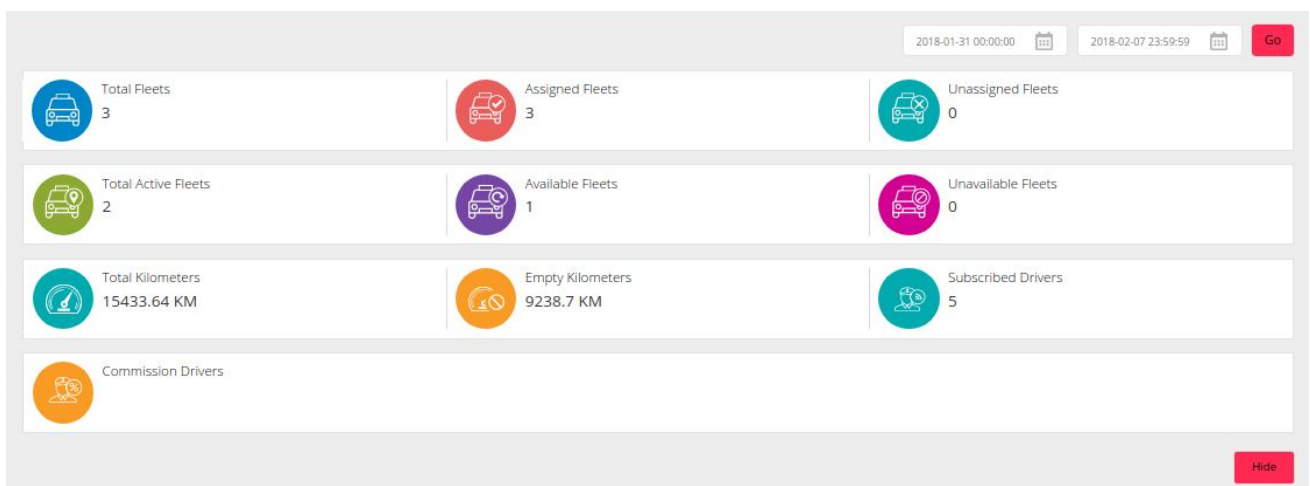

TaxiMobility Company – V 9.0

4. Fleet Tracking

4.1 Dashboard

The Fleet tracking dashboard presents the statistics on fleets, fleet availability, idle running time, driver unavailability and bookings using graphs and vehicle heatmap. The Total Kilometers describes the total distance travelled by fleets during rides including the Empty kilometers. Empty kilometers describes the distance travelled empty to pick up a passenger and also without any ride.

Fleet availability

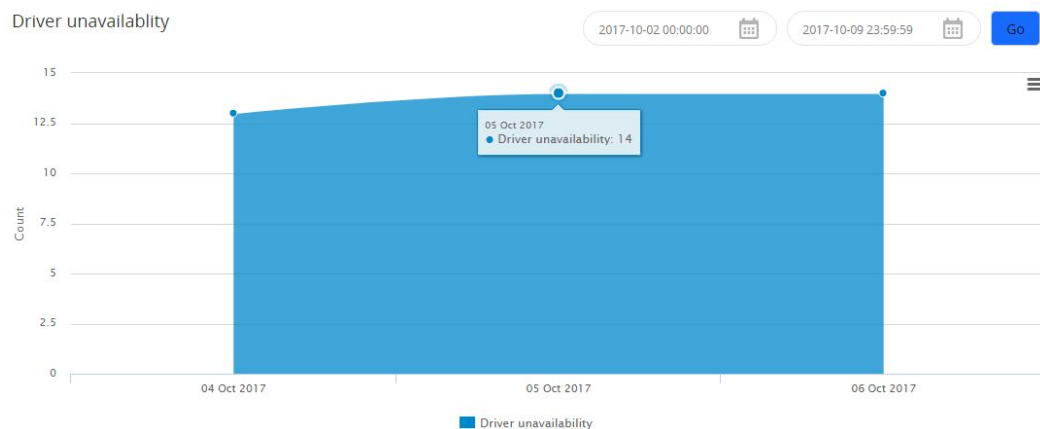

The Fleet availability graph indicates the count of vehicles that were available but did not receive any rides for the specified time interval. The filter option can be used to select the desired date range.

TaxiMobility Company – V 9.0

Driver unavailability

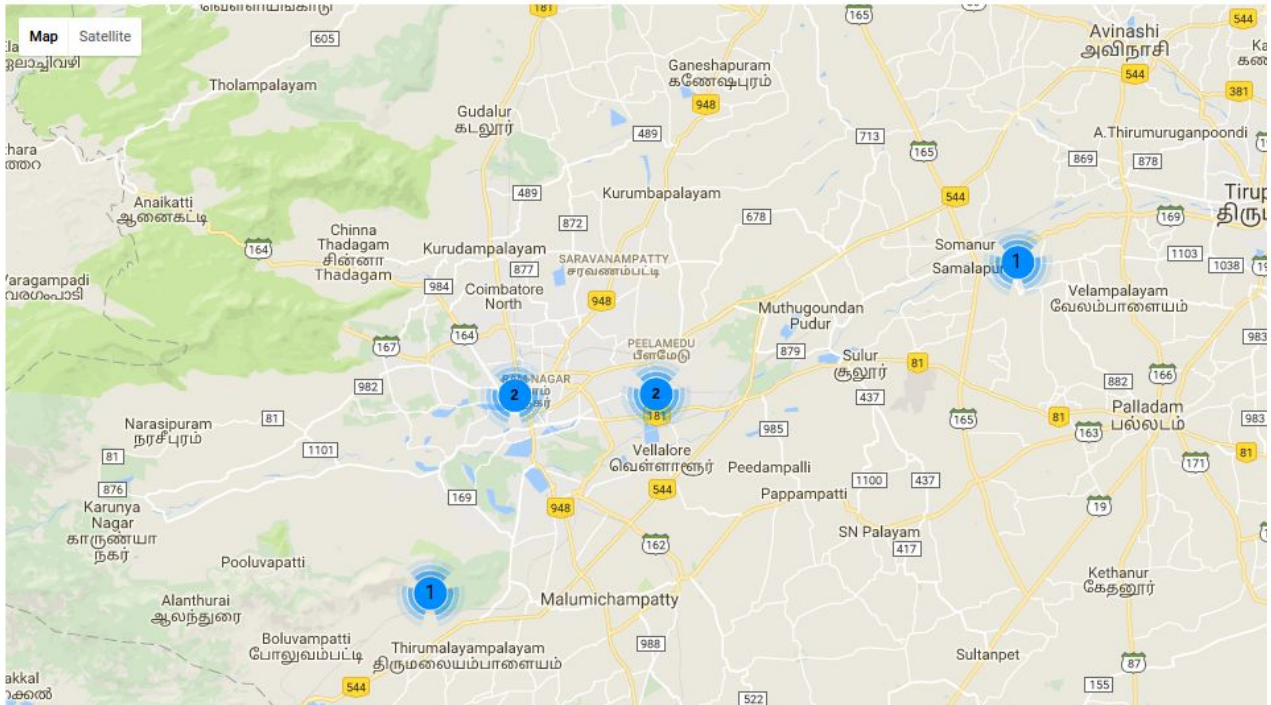

The number of drivers who were available but did not accept any passenger request for the day are represented through the graph below.

Vehicle heatmap

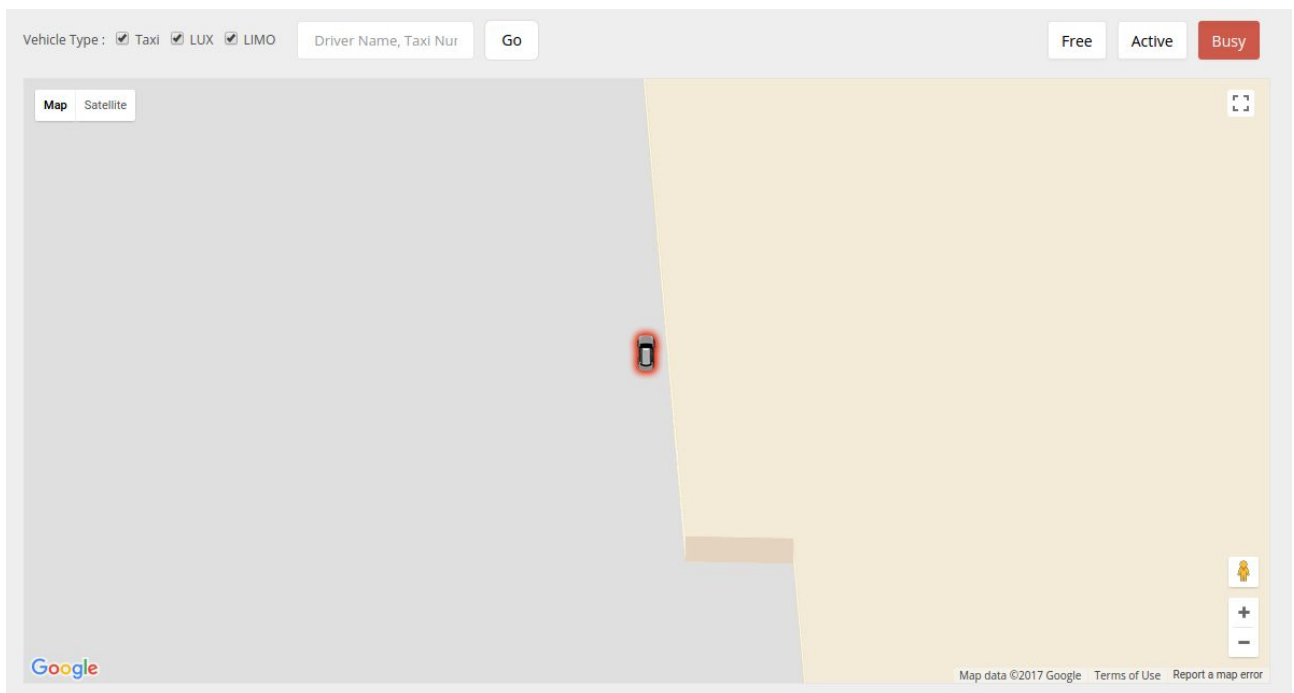

The Vehicle heatmap visualises the position of vehicles in a location, indicating the fleet availability in each area.

Vehicle HeatMap

4.2 Track

Admin can track the vehicles by selecting the vehicle model, or individually by the taxi number or driver name. Admin can also track the vehicle selecting the drivers by their status of availability. On clicking Free, Active or Busy, the respective fleets will be highlighted in the Map.

4.3 Fleet Management

Fleet models

This functionality allows to set the fare for the different vehicle types. The Action button allows to set a more elaborate record of each vehicle.

The vehicle name, model size and fare details can be tabulated here.

If the fare is calculated by distance, a base fare is set for a fixed distance for each vehicle model. Any ride within that distance will be charged only the base fare. From that point, minimum KM and a minimum fare is fixed, and any ride that is completed within the minimum KM is charged with the below KM fare (in addition to the minimum fare and the base fare). Any ride that exceeds the minimum KM is charged with the above KM fare (in addition to the minimum fare and the base fare).

The fare can also be calculated per km/mile instead of below km/miles and above km/miles fare. A minimum fare is set for a fixed distance and every additional km/mile is charged with set the per km/mile fare.

A cancellation fee can be set for all rides that are cancelled. Waiting charges for an hour can be fixed here. Separate charges for night and evening rides can be recorded, if preferred.

Fare management

Minimum KM - This is the minimum kilometer range set for short trips.

Minimum fare - This is the fare for the distance travelled below the Minimum KM. The minimum amount can be increased or decreased as required. This fare is applicable when a passenger takes up ride for a short distance which is below the minimum KM.

Base fare - The basic service charge is applicable for all rides that covers a distance above the Minimum KM.

Below KM and Above KM range - This acts as a divider in calculating the KM fare. Assume the value is 10 KM.

Below KM fare - This is applicable when the distance covered is below 10 KM (for instance, if the distance is 8 KM).

Above KM fare - This is applicable when the distance covered is above 10 KM (for instance, if the distance is 18 KM).

KM wise fare - The fare is calculated based on the distance. A minimum fare is set for a fixed distance and every additional km/mile is charged with the per km/mile fare.

Tax - The tax percentage will be included in the total ride fare.

Cancellation fee - This is charged when a passenger cancels the trip.

Waiting fee - Waiting charges are applied when the vehicle is put on waiting or when the vehicle runs below the minimum fleet speed.

Night fare - This fare is set in percentage for the rides booked during nights. The amount is included in the total ride fare. The time range can be set by the admin.

Evening fare - Admin can set the evening fare for rides in percentage. This is added to the total ride fare.

City based fare (%) - The city based fare % is defined in Manage City and the amount is added along with the Distance, Night and Evening Fare.

Package plan

The passengers can be rolled out with two ride packages that are Rental and Outstation.

- Rental — With single booking, the passengers get cab at their disposal for as long as they want and travel to different destination with single booking. If the time or distance exceeds the package limit, the nominal additional charges will be charged and the trip can be continued beyond the package limit. It avails the options to book cab immediately or in advance.
- Outstation — The passengers book cab for intercity travel. This package allows user to book cabs prior to the travel date or time.

5. Dispatcher

5.1 Dashboard

The dispatcher dashboard presents an overview of all missed, rejected or cancelled bookings, payments through different payments modes, booking types and the heatmap.

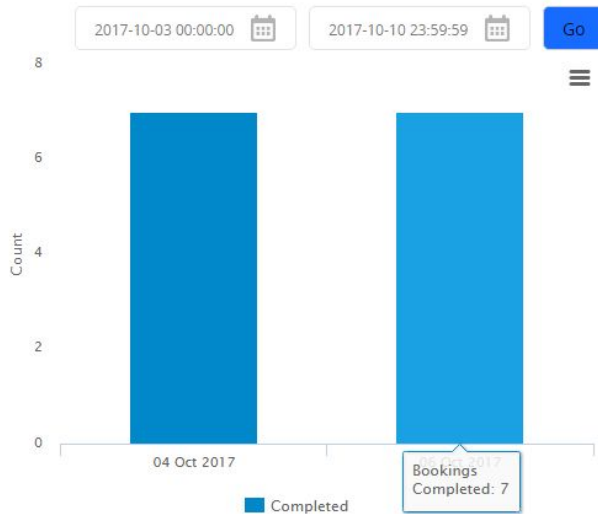

Bookings and missed bookings

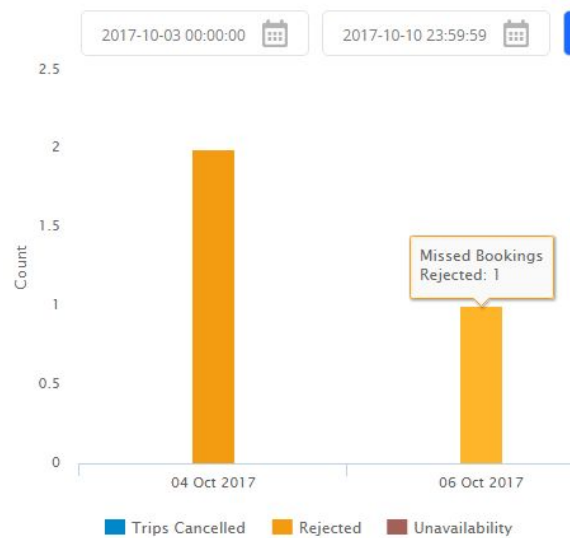

The dashboard displays the count of all completed rides and the rides missed due to either rejected by the driver or cancelled by the rider.

TaxiMobility Company – V 9.0

Bookings

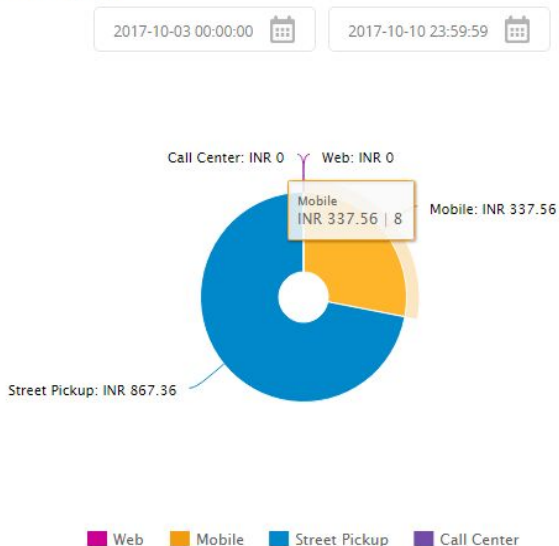

Missed Bookings

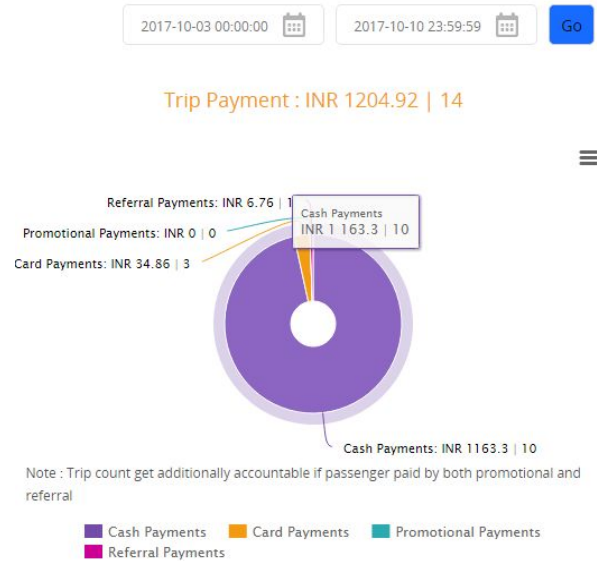

Booking type and payment mode

Bookings done via website, mobile app, street pickups and call centers are displayed individually. The number of payments received through referral programs, promotions, card and by cash are also indicated. The filter option can be used to get the data on the particular date and time.

Booking Type

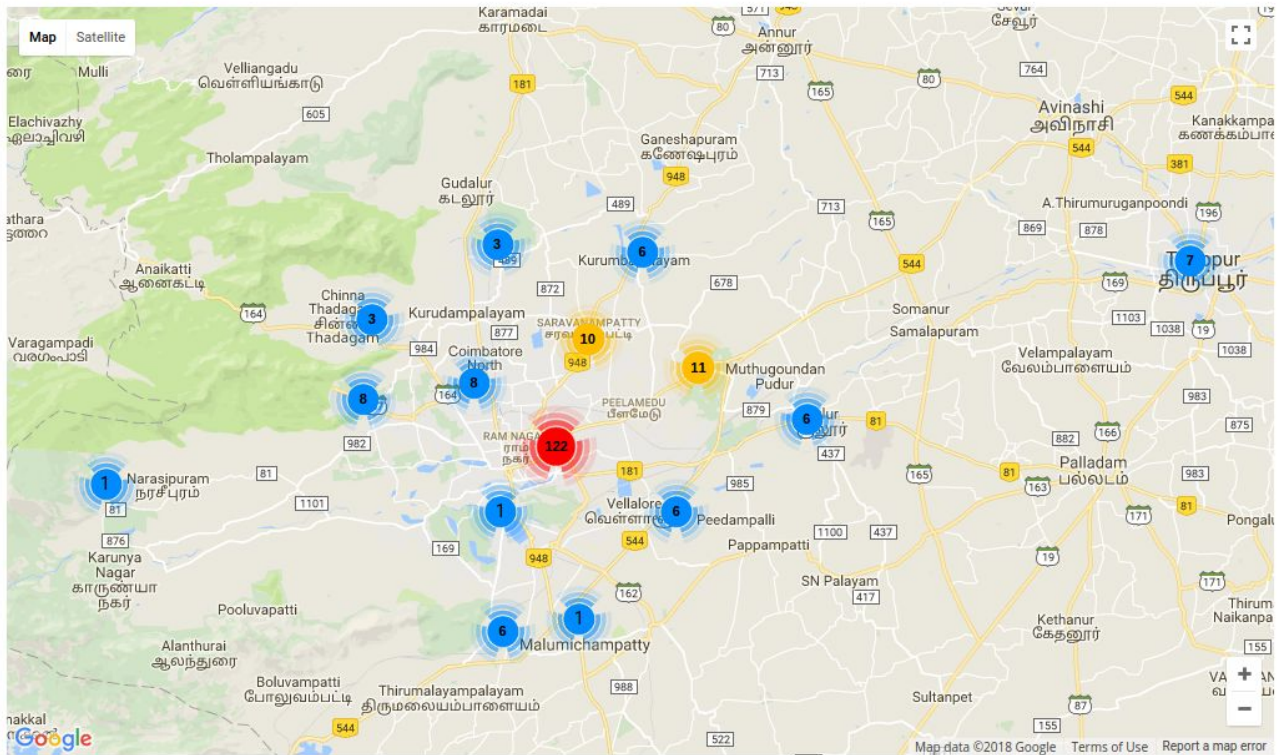

Payment Mode

Booking heatmap

The booking heat map indicates the location with the highest booking rate.

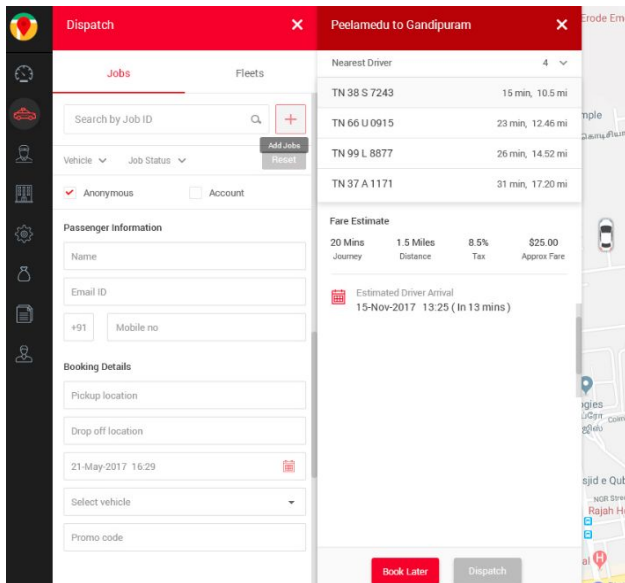

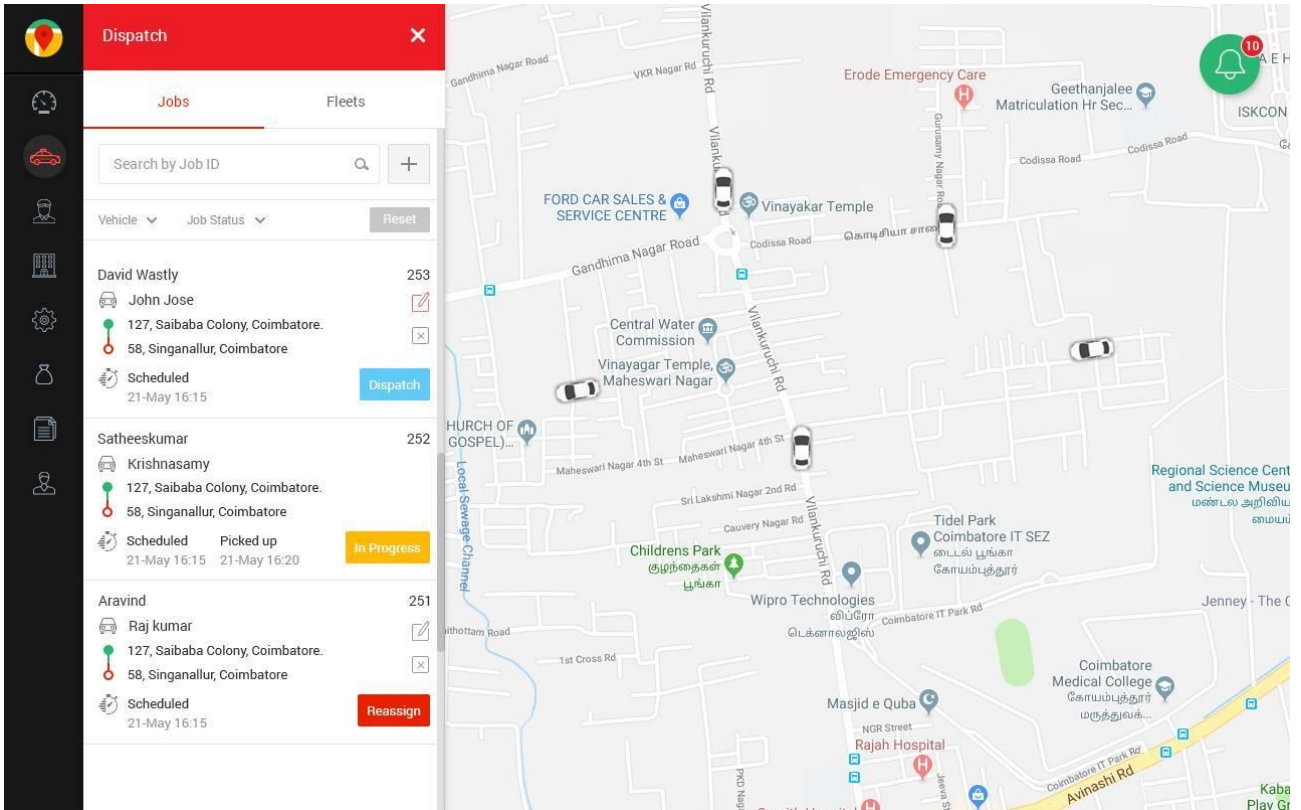

Booking Heat Map

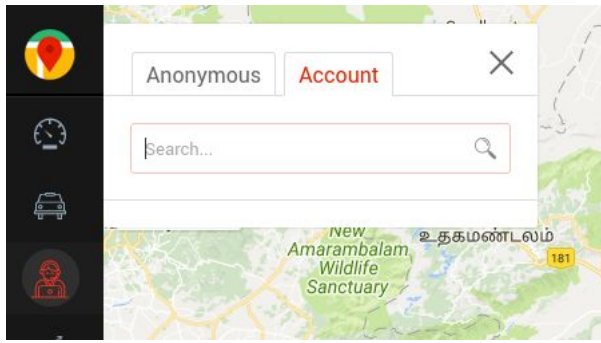

5.2 Dispatch

Refined filter and search capabilities based on vehicle/booking/driver status and vehicle model enables Admin to view and manage vehicle status, and assign or reassign a ride for on demand or scheduled bookings. The Admin can also view live tracking with vehicle movements.

TaxiMobility Company – V 9.0

Admin can manually add a booking by providing the passenger information, location details, date, time and by selecting the vehicle from the dropdown list.

Admin can also view the details of an already assigned booking using the search option.

5.3 Fleet dispatch settings

The dispatch settings is used to set the dispatch type as Auto or Manual. Notification is sent to the driver based on the dispatch settings.

Auto - Automatically assigns the trip to free drivers.

Manual - It shows the available drivers to assign the trip.

Auto & Manual - At the time of each trip dispatch, the system will ask to choose any one of the options.

In scheduled or advance booking, Admin can set the time interval between the time at which a notification to accept the ride request is sent to the assigned driver and the scheduled pickup time.
